INTRODUCTION

This document reflects the collection and coding rules for the Global Terrorism Database™. The GTD is an event-level database containing more than 200,000 records of terrorist attacks that took place around the world since 1970. It is maintained by the National Consortium for the Study of Terrorism and Responses to Terrorism (START) at the University of Maryland. This codebook describes the GTD’s methodology, inclusion criteria, and variables. The GTD research team updates the codebook periodically; key changes are documented below.

This codebook is divided into two broad areas. First, this introduction explains the origins of the GTD, its data collection methodology and general principles. Our goal is to be as transparent as possible regarding how the database is produced, with a commitment to creating a highly comprehensive and consistent terrorist attack dataset. We describe the GTD’s definition of terrorism, inclusion criteria and other definitional filtering mechanisms, and the current data collection methodology.

Second, the codebook outlines the variables that constitute the GTD and defines the possible values of the variables. These categories include the GTD ID, incident date, incident location, incident information, attack information, target/victim information, perpetrator information, perpetrator statistics, claims of responsibility, weapon information, casualty information, consequences, kidnapping/hostage taking information, additional information, and source information.

The GTD is publicly available to search, browse, and download on the [GTD website](#). In 2019, the University of Maryland began a partnership with [CHC Global](#) to manage the commercial distribution of the GTD. All users of the GTD must accept the terms of the [End User License Agreement](#).

Thank you for your interest in the GTD. We hope that you find it to be a useful tool for understanding the patterns, causes, and consequences of terrorism. If you have any questions or feedback about the database, please contact the GTD team via email at gtd@start.umd.edu. We welcome your comments on the data and its application to your work.

The Origins of the GTD

The current GTD is the product of several phases of data collection efforts, each relying on publicly available, unclassified source materials. These include media articles and electronic news archives, and to a lesser extent, existing data sets, secondary source materials such as books and journals, and legal documents.

The original set of incidents that comprise the GTD occurred between 1970 and 1997 and were collected by the Pinkerton Global Intelligence Service (PGIS)—a private security agency. After START completed digitizing these handwritten records in 2005, we collaborated with the Center for Terrorism and Intelligence Studies (CETIS) to continue data collection beyond 1997 and expand the scope of the information recorded for each attack. CETIS collected GTD data for terrorist attacks that occurred from January 1998 through March 2008, after which ongoing data collection transitioned to the Institute for

引言

本文件反映了全球恐怖主义数据库™的收集和编码规则。GTD是一个事件级数据库，包含自1970年以来全球发生的超过20万起恐怖袭击记录。该数据库由马里兰大学国家恐怖主义与反恐研究联盟（START）维护。本编码手册描述了GTD的方法论、纳入标准和变量。GTD研究团队会定期更新编码手册；关键变更记录如下。

本编码手册分为两大领域。首先，引言部分解释了全球恐怖主义数据库（GTD）的起源、数据收集方法和一般原则。我们的目标是尽可能透明地说明数据库的生产过程，致力于创建一个高度全面且一致的恐怖袭击数据集。我们描述了GTD的恐怖主义定义、纳入标准及其他定义性过滤机制，以及当前的数据收集方法。

其次，编码手册概述了构成GTD的变量，并定义了变量的可能取值。这些类别包括GTD编号、事件日期、事件地点、事件信息、袭击信息、目标/受害者信息、肇事者信息、实施者统计、责任声明、武器信息、伤亡信息、后果、绑架/劫持信息、附加信息和来源信息。

全球恐怖主义数据库可供搜索、浏览和下载，网址在[GTD网站](#)上。2019年，马里兰大学与[CHC Global](#)开始合作，管理GTD的商业分发。所有GTD使用者必须接受[最终用户许可协议](#)的条款。

感谢您对GTD的兴趣。我们希望它能成为您理解恐怖主义的模式、原因和后果的有用工具。如果您对数据库有任何疑问或反馈，请通过电子邮件gtd@start.umd.edu联系GTD团队。我们欢迎您对数据及其在您工作中的应用提出意见。

GTD的起源

当前的GTD是多个阶段数据收集工作的成果，每个阶段都依赖于公开的、非机密的源材料。这些包括媒体文章和电子新闻档案，以及较小程度上现有的数据集、书籍和期刊等二手源材料以及法律文件。

构成全球恐怖主义数据库（GTD）的原始事件集发生于1970年至1997年，由私人安全机构平克顿全球情报服务（PGIS）搜集。在START于2005年完成对这些手写记录的数字化后，我们与恐怖主义与情报研究中心（CETIS）合作，继续收集1997年之后的数据，并扩大了每次袭击记录信息的范围。CETIS收集了1998年1月至2008年3月期间发生的恐怖袭击的GTD数据，此后的持续数据收集工作移交给了暴力组织研究学会（ISVG）

the Study of Violent Groups (ISVG). ISVG continued as the primary collector of data on attacks that occurred from April 2008 through October 2011. Beginning with cases that occurred in November 2011, all ongoing GTD data collection is conducted by START staff at the University of Maryland.

Table: GTD Data Collection Phases by Collection Institution

Dates of GTD Attacks	PGIS	CETIS	ISVG	START
1/1/1970 – 12/31/1997	X			X
1/1/1998 – 3/31/2008		X		X
4/1/2008 – 10/31/2011			X	X
11/1/2011 – 06/31/2020 (ongoing)				X

GTD staff based at START headquarters at the University of Maryland integrated and synthesized data collected across the entire 1970-2020 time span with the goal of ensuring that the definitions and methodology are as consistent as possible across all phases of data collection. In addition, GTD staff at START retroactively coded several key variables not originally available for the PGIS cases, conducted numerous quality control projects, and supplemental data collection efforts. These supplemental data collection efforts involve systematically comparing a variety of additional sources of terrorism incident data to the GTD to identify any missing events that satisfy GTD inclusion criteria. GTD staff research these missing events to identify primary sources of information and code the attack details for addition to the GTD.

Users familiar with the GTD’s data collection methodology are aware that incidents of terrorism from 1993 are not present in the GTD because they were lost prior to START’s compilation of the GTD from multiple data collection efforts. Several efforts were made to re-collect these incidents from original news sources. Unfortunately, due to the challenges of retrospective data collection for events that happened more than 25 years ago, the number of 1993 cases for which sources were identified is only 15% of estimated attacks. As a consequence, we exclude all 1993 attacks from the GTD data to prevent users from misinterpreting the low frequency in 1993 as an actual count. However, Appendix II provides country level statistics for 1993. These figures were obtained from an early report on the data compiled before the 1993 files were lost. In addition, the 1993 data we do have is available to download from the [GTD website](#).

Key factors that impact the content of datasets like the GTD include definitions, sources, and workflows. While the GTD team has applied a single definition of terrorism over the full span of the database, access to source materials and the efficiency of workflows have varied over time. For example, the availability of source materials was best at times when the data collection had the shortest lag behind real time. Improvements in technology and the expansion of the internet have enhanced both the accessibility of source materials and the efficiency of workflows. In general, users should interpret trends over time with caution. In particular, note that differences in levels of attacks and casualties before and after January 1, 1998; April 1, 2008; and January 1, 2012 may be partially explained by shifts in data collection. Likewise, the GTD is not directly comparable to other sources of data on terrorism, as differences in definitions, sources, and workflows will produce misleading inferences.

(ISVG) 。ISVG继续作为2008年4月至2011年10月期间发生袭击数据的主要收集者。从2011年11月发生的案例开始，所有持续的GTD数据收集工作均由马里兰大学的START工作人员进行。

表格：按收集机构划分的GTD数据收集阶段

GTD攻击日期	PGIS	CETIS
1970年1月1日 – 1997年12月31日	X	
1998年1月1日 – 2008年3月31日		X
2008年4月1日 – 2011年10月31日		X
2011年11月1日 – 2020年6月31日（持续中）		X

位于马里兰大学START总部的GTD工作人员整合并综合了1970-2020整个时间跨度内收集的数据，目标是确保定义和方法论在数据收集的所有阶段尽可能保持一致。此外，GTD工作人员对PGIS案例中最初无法获得的几个关键变量进行了回顾性编码，开展了众多质量控制项目，并进行了补充数据收集工作。这些补充数据收集工作涉及系统地将各种额外的恐怖主义事件数据来源与GTD进行比较，以识别任何满足GTD纳入标准的缺失事件。GTD工作人员研究这些缺失事件，以确定主要信息来源，并编码袭击详情以便添加到GTD中。

熟悉GTD数据收集方法的用户都知道，1993年的恐怖主义事件并未收录在GTD中，因为它们被START整合多个数据收集工作的GTD之前就已丢失。我们曾多次尝试从原始新闻来源重新收集这些事件。不幸的是，由于对25年前发生的事件进行回溯性数据收集存在困难，能够找到来源的1993年案例数量仅占估计攻击量的15%。因此，我们将所有1993年的攻击事件从GTD数据中排除，以防止用户将1993年的低频率误认为是实际计数。然而，附录II提供了1993年的国家层面统计数据。这些数据来自1993年文件丢失前编译的一份早期报告。此外，我们现有的1993年数据可从[GTD网站](#)下载。

影响像全球恐怖主义数据库（GTD）这类数据集内容的关键因素包括定义、来源和工作流。虽然GTD团队在整个数据库范围内应用了单一的恐怖主义定义，但源材料的获取和工作流的效率随时间而变化。例如，当数据收集与实际时间之间的滞后最短时，源材料的可得性最佳。技术的进步和互联网的扩展增强了源材料的可获取性和工作流的效率。总体而言，使用者应谨慎解读随时间变化的趋势。特别要注意，1998年1月1日、2008年4月1日和2012年1月1日前后攻击和伤亡水平的差异可能部分由数据收集的变化解释。同样，GTD与其他恐怖主义数据来源不可直接比较，因为定义、来源和工作流的差异会导致误导性推论。

Given the varied context of GTD data collection, users of the database should note the following general practices:

Legacy Issues – The GTD now includes incidents of terrorism from 1970 to June 2020, however a number of new variables were added to the database beginning with the post-1997 data collection effort. Wherever possible, values for these new variables were retroactively coded for the original incidents, however some of the new variables pertain to details that were not recorded in the first phase of data collection. For any newly added variables that were not retroactively coded and thus only exist for post-1997 cases and earlier events added through recent supplemental collection efforts the Codebook notes the following:

Note: This field is presently only systematically available with incidents occurring after 1997.

Transparency – The criteria and coding system were designed to be completely transparent and available to all future users of the database. As such, the commitment was made to describe coding decisions wherever possible.

Inclusiveness – It was recognized at the outset that researchers and public officials ascribe to varying definitions of terrorism. Therefore, the approach that was adopted was to collect and structure data such that it would be useful to as broad an audience as possible. The method chosen to achieve this was to err on the side of inclusiveness in our criteria, but to include in the database filtering mechanisms through which users can truncate the data set according to the definition of terrorism that meets their needs. In such scenarios, the user can filter the data according to specific components of established definitions of terrorism. These filtering methods are explored below.

Funding -- GTD collection, maintenance, and improvements have been supported by:

- United States National Institute of Justice
- United States Department of Homeland Security, Science and Technology Directorate
- United States Department of State, Bureau of Counterterrorism and Countering Violent Extremism
- United States Department of Defense, Combating Terrorism Technical Support Office
- German Federal Foreign Office
- United Kingdom Foreign, Commonwealth, and Development Office

All decisions about GTD data collection are made independently by the research team. The GTD does not represent the official position or policy of any funding agency.

Privacy – It is the practice of the GTD research team to accurately represent publicly available information and protect the privacy of individuals. All information in the GTD is drawn from public reporting, and in some cases the database contains information related to specific individuals. This information includes the names of perpetrators, suspected perpetrators, and victims of terrorist attacks as described in source documents. We require that you take every possible precaution to use this information responsibly, for the purpose of advancing the understanding of terrorism.

鉴于GTD数据收集的背景多样性，数据库使用者应注意以下一般做法：

遗留问题 – 全球恐怖主义数据库现在包含从1970年到2020年6月的恐怖主义事件，但自1997年后的数据收集工作开始，数据库中增加了许多新变量。在可能的情况下，这些新变量的值被回溯编码到原始事件中，但有些新变量涉及的数据在第一阶段数据收集中并未记录。对于任何未进行回溯编码、因此仅存在于1997年后案例以及通过近期补充收集工作添加的早期事件的新增变量，编码手册说明如下：

注意：此字段目前仅系统性地适用于1997年后发生的事件。

透明度 – 设计标准和编码系统旨在完全透明，并对数据库的所有未来使用者开放。因此，我们承诺尽可能描述编码决策。

包容性 – 从一开始就认识到，研究人员和公共官员对恐怖主义的定义各不相同。因此，所采取的方法是收集和结构化数据，使其对尽可能广泛的受众有用。实现这一目标所选的方法是在我们的标准中偏向包容性，但在数据库中纳入过滤机制，使用者可以根据满足其需求的恐怖主义定义截取数据集。在这种场景下，使用者可以根据既定恐怖主义定义的特定组成部分过滤数据。这些过滤方法将在下文探讨。

资金 -- GTD的收集、维护和改进得到了以下机构的支持：

- 美国国家司法研究所 ▪ 美国国土安全部科学和技术局 ▪ 美国国务院反恐和反暴力极端主义局 ▪ 美国国防部反恐技术支持办公室 ▪ 德国联邦外交部 ▪ 英国外交、联邦和发展事务部

关于全球恐怖主义数据库数据收集的所有决策均由研究团队独立做出。全球恐怖主义数据库不代表任何资金机构的官方立场或政策。

隐私 – GTD研究团队的做法是准确呈现公开信息并保护个人隐私。GTD中的所有信息均来自公开报道，在某些情况下，数据库包含与特定个人相关的信息。这些信息包括源文件中描述的肇事者姓名、疑似肇事者以及恐怖袭击受害者。我们要求您采取一切可能的预防措施，负责任地使用这些信息，以促进对恐怖主义的理解。

Under no circumstances should the GTD be used as an official source of information on the legal disposition of criminal charges, or in support of background investigations on individuals. The GTD is not an official government database. Statistical information contained in the GTD is based on reports from a variety of public media sources that have been vetted for validity and bias. Users should not infer any additional actions or results beyond what is presented in a GTD entry. Users should not infer that an individual associated with a particular attack was tried and convicted of terrorism or any other criminal offense. Users should not assume that a named individual referenced in the GTD is the same person as another who shares the same or similar names. The GTD does not include sufficient unique identifiers or personally identifiable information (PII, e.g., date of birth, home address, identification number) to confirm a particular individual’s identity, and the GTD team does not have access to this information.

While the research team makes every reasonable effort to corroborate facts from multiple independent sources and to eliminate errors through a systematic review process, the magnitude of the database (more than 200,000 attack records) means that occasionally an error will evade detection and appear in the database or a valid incident will not be recorded. In these cases, we value input from users who become aware of such an error to contact us and let us know so we can review the case and make any appropriate corrections. If new documentation about an event becomes available, an entry may be modified, as necessary and appropriate. If you encounter any information that you believe to be inaccurate or incomplete, please contact gtd@start.umd.edu.

- The GTD team observes the following general practices to promote accuracy and privacy for publicly reported information related to named individuals.
- Time lag: The GTD is collected on a lag behind real time, helping to avoid erroneous reporting published in the immediate aftermath of an attack, which sometimes includes false identification of alleged assailants. We record information about terrorist attacks that is as “settled” as possible once reporting and investigations have progressed.
 - Prioritizing recent sources: The research team prioritizes information from more recently published sources in two ways: 1) in the automatic de-duplication process for source documents the older versions of duplicate documents are discarded and more recent documents—which may contain updated information—are used for data collection; and 2) in the manual data collection process, subject matter experts are trained to critically evaluate the relative accuracy of source documents and prioritize more recent source documents with a higher degree of validity and a lower degree of bias.
 - Source validity: The research team reviews and scores the validity each publication in the source document pipeline, and this score is taken into account as appropriate at each stage of the data collection process. Events are not added to the GTD unless they are documented by at least one independent source assessed as highly valid.
 - Geo-location: The maximum specificity of geo-location coordinates for the attack is the city centroid, or in the case of large cities, the neighborhood/region centroid.
 - Specific language about assailants: Information about named individuals identified as assailants or suspected assailants may be referenced in event summaries. It is the practice of the research team for this information to be as specific as possible. For example, the summary may specify that a named individual “claimed responsibility in a video” or “was charged in connection with the

在任何情况下，GTD都不得用作刑事指控法律处置的官方信息来源，也不得用于支持对个人的背景调查。GTD不是官方政府数据库。GTD中包含的统计信息基于来自各种公共媒体来源的报道，这些报道已对有效性和偏差进行了审查。使用者不应推断GTD条目中呈现的内容之外的任何额外行动或结果。使用者不应推断与特定袭击相关的个人已被审判并判定犯有恐怖主义或任何其他刑事罪行。使用者不应假设GTD中提及的具名个人与另一个具有相同或相似姓名的人是同一个人。GTD不包含足够的唯一标识符或个人身份信息（PII，如出生日期、家庭住址、身份证号码）来确认特定个人的身份，并且GTD团队无法获取这些信息。

尽管研究团队尽一切合理努力，通过多个独立来源核实事实，并通过系统审查流程消除错误，但由于数据库规模庞大（超过20万条袭击记录），偶尔会出现错误未被检测到并出现在数据库中，或有效事件未被记录的情况。在这种情况下，我们重视使用者的反馈，如果您发现此类错误，请与我们联系，以便我们审查案例并进行适当更正。如果关于某个事件的新文件可用，条目可能会根据需要进行适当修改。如果您遇到任何您认为不准确或不完整的信息，请联系 gtd@start.umd.edu。

- 全球恐怖主义数据库团队遵循以下一般做法，以提高与已命名个人相关的公开报告信息的准确性和隐私保护。
- 时间滞后：全球恐怖主义数据库的收集滞后于实时，这有助于避免袭击发生后立即发布的错误报道，这些报道有时会包含对疑似袭击者的错误识别。我们记录尽可能“确定”的恐怖袭击信息，即在报道和调查取得进展之后。
 - 优先考虑近期来源：研究团队通过两种方式优先考虑较近期发布的来源信息：1) 在源文件的自动去重过程中，旧版本的重复文件被丢弃，而可能包含更新信息的较新文件被用于数据收集；2) 在手动数据收集流程中，主题专家接受培训，以批判性评估源文件的相对准确性，并优先考虑有效性更高、偏差更低的较新源文件。
 - 来源有效性：研究团队审查并评分源文件管道中每个出版物的有效性，该评分在数据收集流程的每个阶段酌情考虑。除非至少有一个被评估为高度有效的独立来源记录，否则事件不会被添加到全球恐怖主义数据库中。
 - 地理位置：袭击的地理位置坐标的最大具体性是城市中心点，或者对于大城市而言，是社区/区域中心点。
 - 关于袭击者的具体语言：事件摘要中可能提及被确认为袭击者或疑似袭击者的指定个人的信息。研究团队的做法是使这些信息尽可能具体。例如，摘要可能会指定某个指定个人“在视频中声称负责”或“被指控与

attack,” as appropriate based on source documents. If the source documents report conflicting or speculative information about the individuals or groups responsible for the attack, the research team will systematically note that the perpetrator information is “suspected.” If the source documents name individuals only loosely linked to the attack, the research team will not include the names in the summary.

- Victim identification: Including the names of victims of terrorist attacks serves at least two purposes: 1) allowing the data collection team to identify and resolve potential duplicate entries; and 2) helping database users locate particular records in which high-profile individuals were targeted.
- Updating information: The current data collection methodology (described below) supports systematically updating previously recorded events as new information becomes available.

Codebook Changes – This GTD Codebook supersedes prior codebooks. With only minor exceptions, however, the user will note that variables and variable values applied in the current GTD are consistent with those used in former versions of the GTD. The following changes have been made to the variables/values:

No substantive changes were made to the codebook 2019 – 2021.

Changes made in July 2018

- The following changes were made to the target subtype (*targsubtype*) variables. All changes were applied retroactively to the entire dataset.
 - Target subtype = 1 was changed from “Gas/Oil” to “Gas/Oil/Electric.”
 - Target subtype = 65 was changed from “Refugee Camp” to “Refugee (including Camps/IDP/Asylum Seekers).” Attacks against these targets were re-classified under target type = 14 (Private Citizens and Property) rather than target type = 13 (Other).
 - Target subtype = 112 was added to capture attacks targeting “Legal Services.”
 - Target subtype = 113 was added to capture attacks targeting individuals whom perpetrators identify as “Alleged Informants.”
- Weapon type = 6 (*weaptype*) was changed from “Explosives/Bombs/Dynamite” to “Explosives” for brevity. This does not represent a substantive change.
- The following changes were made to the weapon subtype (*weapsubtype*) variables. All changes were applied retroactively to the entire dataset.
 - Weapon subtype = 2 was changed from “Automatic Weapon (including semi-automatic)” to “Automatic or Semi-Automatic Rifle.” This does not represent a substantive change.
 - Weapon subtype = 31 was added to capture attacks involving “Pipe Bombs.”

Changes made in June 2017

- A new weapon subtype (*weapsubtype*) called “Explosive” was created under the weapon type (*weaptype*) “Chemical” to document chemical weapons that were delivered via explosive device. Users who are interested in comprehensively identifying attacks in which explosive devices were used should consider this classification, as well as any attacks for which any of the *weaptype* fields are marked “Explosives/Bombs/Dynamite.”

袭击有关”，具体视源文件而定。如果源文件报告关于袭击负责个人或团体的冲突或推测性信息，研究团队将系统性地指出肇事者信息是“疑似”的。如果源文件仅提及与袭击关联松散的指定个人，研究团队将不会在摘要中包含这些姓名。

- 受害者识别：包括恐怖袭击受害者的姓名至少有两个目的：1) 允许数据收集团队识别并解决潜在的重复条目；2) 帮助数据库用户找到针对高知名度个人的特定记录。
- 信息更新：当前的数据收集方法（如下所述）支持随着新信息的出现，系统性地更新先前记录的事件。

编码手册变更 – 本全球恐怖主义数据库代码手册取代了以前的代码手册。然而，除了少数例外，用户会注意到当前全球恐怖主义数据库中使用的变量和变量值与以前版本保持一致。对变量/值做了以下更改：

2019年至2021年编码手册无实质性变更。

2018年7月进行的变更

- 对目标子类型 (*targsubtype*) 变量进行了以下更改。所有更改都已追溯至整个数据集。
 - 目标子类型 = 1 从 “天然气/石油” 变更为 “天然气/石油/电力。” – 目标子类型 = 65 从 “难民营” 变更为 “难民 (包括营地 / 国内流离失所者 / 寻求庇护者)。” 针对这些目标的攻击被重新归类为目标类型 = 14 (私人公民与财产)，而非目标类型 = 13 (其他)。
 - 目标子类型 = 112 被添加以涵盖针对 “法律服务” 的攻击。
 - 目标子类型 = 113 被添加以涵盖针对被认为 “涉嫌告密者” 的攻击。
- 武器类型 = 6 (*weaptype*) 已从 “炸药/炸弹/甘油炸药” 变更为 “炸药”，以简化表述。这并不代表实质性变更。
- 对武器子类型 (*weapsubtype*) 变量进行了以下更改。所有更改均追溯至整个数据集。
 - 武器子类型 = 2 从 “自动武器 (包括半自动)” 更改为 “自动或半自动步枪”。这并不代表实质性变更。
 - 武器子类型 = 31 新增用于捕获涉及 “管道炸弹” 的攻击。

2017年6月所做的更改

- 在武器类型 (*weaptype*) “化学” 下创建了一个名为 “爆炸物” 的新武器子类型 (*weapsubtype*)，用于记录通过爆炸装置投送的化学武器。希望全面识别使用爆炸装置的袭击的用户，应考虑这一分类，以及任何 *weaptype* 字段标记为 “炸药/炸弹/甘油炸药” 的袭击。

- In previous versions of the GTD attacks carried out by unaffiliated individuals had “Unaffiliated Individual(s)” recorded in the Perpetrator Group Name (*gname*) field. Noting inconsistency between coding these cases with “Unaffiliated Individual(s)” versus recording available information about the generic identity of the perpetrators, the “Unaffiliated Individual(s)” information has been removed from the *gname* field and placed in a new variable called “Unaffiliated Individual(s)” (*individual*). All cases in question were reviewed and, where possible, information about the generic identity of the perpetrators was recorded in the *gname* field. Coding details for the *individual* variable can be found below. Likewise, all cases where *gname* was recorded as “Other” have been reviewed and re-classified as appropriate.
- Previous versions of the GTD recorded the number of injuries (*nwound*) that occurred in New York City on September 11, 2001 as blank or “Unknown” due to the difficulty of determining a valid estimate. While this remains challenging, particularly given the serious long-term health impacts of the September 11th attacks, *nwound* now reflects an estimate for the number of people injured, based on a compilation of information from the 9/11 Victim Compensation Fund. While numerous updates are made to casualty information in the GTD each year, this warrants special acknowledgement due to the considerable impact on statistics. Note also that the number of injuries to US citizens (*nwoundus*) remains unknown.
- Previous versions of the GTD recorded non-integers in the casualty fields in cases where casualty information was aggregated across multiple attacks in source materials. The non-integers resulted from an equal distribution of casualty counts across reported attacks. (See the section on “preservation of statistical accuracy” below). These numbers have been revised so that, even when casualty information is disaggregated and divided across reported attacks, only whole numbers are recorded. GTD analysts use their best judgment when estimating casualty information that has been aggregated in source documents.

Changes made in June 2016

- Target subtype (*targsubtype*) changes for attacks against military targets: Four target subtypes (Navy, Air, Coast Guard, and Army) were removed due to underutilization and lack of mutual exclusivity with other target subtypes. These were replaced with the following target subtypes: Military Weaponry, Military Aircraft, Military Maritime, and Non-combatant Personnel. These changes were applied to the entire dataset.
- Weapon subtype (*weapsubtype*) changes for attacks involving incendiary weapons: The weapon subtype Flamethrower was removed due to underutilization, and replaced with Molotov Cocktail/Petrol Bomb. This change was applied to the entire dataset.
- Edits were made to more than 70 entries in the Perpetrator Group Name (*gname*) field. These changes were entirely cosmetic, to improve spelling and style consistency. Note that the entry “Individual” was changed to “Unaffiliated Individual(s)” to more accurately reflect its usage.
- Though not a change to the structure of the codebook, users should note that with the June 2016 publication of the GTD, the entire dataset has been geo-coded and includes *Latitude* and *Longitude* (where known) and information on the *Specificity* of these coordinates.

Changes made in June 2015

- 在以前的全球恐怖主义数据库版本中，由无关联个人实施的袭击在实施者团体名称（*gname*）字段中记录为“无关联个人”。注意到在编码这些案例时使用“无关联个人”与记录肇事者通用身份信息之间存在不一致，因此已将“无关联个人”信息从*gname*字段移除，并放入一个名为“无关联个人”（*individual*）的新变量中。所有相关案例均经过审查，并在可能的情况下将肇事者的通用身份信息记录在*gname*字段中。关于*individual*变量的编码详情见下文。同样，所有*gname*记录为“其他”的案例也已进行审查并重新分类。

在之前的全球恐怖主义数据库（GTD）版本中，由于难以确定有效估计值，2001年9月11日纽约市发生的受伤人数（*nwound*）被记录为空白或“未知”。尽管这仍然具有挑战性，尤其是考虑到9月11th 袭击带来的严重长期健康影响，*nwound*现在反映了基于9/11受害者赔偿基金信息汇编的受伤人数估计值。虽然每年GTD都会对伤亡信息进行多次更新，但由于对统计数据影响巨大，此更新值得特别说明。另请注意，美国公民受伤人数（*nwoundus*）仍为未知。

在之前的GTD版本中，当源材料中多个攻击事件的伤亡信息被汇总时，伤亡字段会记录非整数。这些非整数是由于伤亡计数在报告的攻击事件中平均分配所致。（参见下文“统计准确性的保持”部分）。这些数字已经过修订，即使伤亡信息被分解并分配到各个报告的攻击事件中，也只记录整数。GTD分析人员在估计源文件中汇总的伤亡信息时会尽力做出最佳判断。

2016年6月所做的更改

- 针对军事目标的袭击，目标子类型（*targsubtype*）的更改：由于使用率低且与其他目标子类型缺乏互斥性，删除了四个目标子类型（海军、空军、海岸警卫队和陆军）。这些被替换为以下目标子类型：军事武器、军用飞机、军事海事和非战斗人员。这些更改已应用于整个数据集。
- 涉及燃烧武器的袭击，武器子类型（*weapsubtype*）的更改：由于使用率低，删除了武器子类型火焰喷射器，并替换为莫洛托夫鸡尾酒/汽油弹。此更改已应用于整个数据集。
- 对实施者团体名称（*gname*）字段中的70多条条目进行了编辑。这些更改完全是表面性的，旨在提高拼写和风格一致性。请注意，条目“individual”已更改为“无关联个人”，以更准确地反映其用法。
- 虽然这不是编码手册结构的更改，但用户应注意，随着2016年6月GTD的发布，整个数据集已进行地理编码，并包括纬度和经度（已知情况下）以及这些坐标的具体性信息。

2015年6月所做的更改

- Previous versions of the GTD included “Russia and the Newly Independent States (NIS)” as a region category. This region was removed and the constituent countries were re-classified as Central Asia or Eastern Europe.
- Previous versions of the GTD included Northern Ireland, Corsica, and Puerto Rico as locations distinct from Great Britain, France, and the United States. With respect to the locations of attacks (*country*), Northern Ireland and Great Britain have been combined and renamed United Kingdom. Corsica has been combined with France. Puerto Rico has been combined with the United States. These changes do not impact the target nationality variables.
- Previous versions of the GTD used the informal names Congo (Kinshasa) and Congo (Brazzaville) to refer to the Democratic Republic of the Congo (formerly Zaire) and the Republic of the Congo (formerly the People’s Republic of the Congo), respectively. The GTD now uses the formal names for these countries as they existed at the time of the attack. These changes impact the *country* (*country*) and target nationality (*natlty*) variables.

Changes made in August 2014

- Addition of new alternative designation, “State Actor,” for attacks that are classified as “Doubt Terrorism Proper” because it is unclear whether they were carried out by state actors. This category has only been in use for events that occurred after 2012.
- In previous versions of the database the “Doubt Terrorism Proper” variable and “Alternative” categories were only systematically available for attacks that occurred post-1997. We have reviewed the historical data to classify cases as “Doubt Terrorism Proper” or not whenever possible. There remain a large number of historical cases for which this classification is unknown due to insufficient information.
- Addition of Related ID variable, which identifies the eventID numbers of attacks that were carried out as part of a coordinated event.

Changes made prior to August 2014

- The addition of *targetsubtype1*, *targetsubtype2*, and *targetsubtype3* for all cases
- The addition of international/domestic variables: *INT_LOG*, *INT_IDEO*, *INT_MISC*, and *INT_ANY*.
- The addition of *latitude* and *longitude*, and geo-coding *specificity* for a select set of regions.
- The removal of the *situation of multi-party conflict* and *claim of responsibility confirmed* variables due to lack of definitional clarity and inconsistent coding.
- Changing *alternative designation* categories to improve the mutual exclusivity of categories. See below for new values; these changes are reflected in all cases for which this variable was collected.
- Adjustments to *weapon subtype* categories:
 - Combined two categories “Knife” and “Sharp Object Other Than Knife” into one category “Knives and Other Sharp Objects”
 - Added two new categories, “Dynamite/TNT” and “Sticky Bomb” under the heading of “Bombs/Dynamite/Explosives”
- The addition of “Unarmed Assault” as a value for the “Attack Type” variable.
- The addition of “Violent Political Parties” as a value for the “Target/Victim Type” variable.
- Due to the rarity of relevant incidents, the removal of “Agriculture” as a value for the “Target/Victim Type” variable. It is now subsumed under appropriate extant values.

- 之前的全球恐怖主义数据库版本将“俄罗斯和新独立国家”作为一个地区类别。该地区已被移除，其组成国家被重新分类为东欧或中亚。
- 之前的全球恐怖主义数据库版本将北爱尔兰、科西嘉和波多黎各作为不同于大不列颠、法国和美国的地点。关于袭击地点（*country*），北爱尔兰和大不列颠已合并并更名为英国。科西嘉已与法国合并。波多黎各已与美国合并。这些更改不影响目标国籍变量。
- 之前的全球恐怖主义数据库版本使用非正式名称刚果（金沙萨）和刚果（布拉柴维尔）分别指代刚果民主共和国（前扎伊尔）和刚果共和国（前刚果人民共和国）。全球恐怖主义数据库现在使用这些国家在袭击发生时的正式名称。这些更改影响国家（*country*）和目标国籍（*natlty*）变量。

2014年8月所做的更改

- 新增替代标识“国家行为体”，用于那些因无法确定是否由国家行为体实施而被归类为“怀疑是否为纯粹恐怖主义”的攻击。此类别仅适用于2012年后发生的事件。
- 在数据库的早期版本中，“怀疑是否为纯粹恐怖主义”变量和“替代”类别仅系统性地适用于1997年后的攻击。我们已审查历史数据，尽可能将案例归类为“怀疑是否为纯粹恐怖主义”或非此类。由于信息不足，仍有大量历史案例的此分类未知。
- 新增相关ID变量，用于识别作为协同事件一部分实施的攻击的事件ID编号。

2014年8月之前所做的更改

- 为所有案例增加了目标子类型1、目标子类型2和目标子类型3
- 增加了国内/国际变量：*INT_LOG*、*INT_IDEO*、*INT_MISC*和*INT_ANY*。
- 为选定的一组地区增加了纬度和经度，以及地理编码的具体性。
- 由于定义不明确和编码不一致，删除了多党冲突情况和责任声明确认变量。
- 更改了替代名称类别，以提高类别的互斥性。参见下文的新值；这些更改反映在该变量已收集的所有案例中。
- 对武器子类型类别进行了调整：– 将“刀”和“非刀具的锐器”两个类别合并为一个类别“刀具和其他锐器”– 在“炸弹/炸药/爆炸物”标题下增加了两个新类别：“炸药/TNT”和“粘性炸弹”。
- 添加“非武装袭击”作为“攻击类型”变量的一个值。
- 添加“暴力政党”作为“目标/受害者类型”变量的一个值。
- 由于相关事件罕见，删除了“农业”作为“目标/受害者类型”变量的一值。现在它被归入适当的现有值中。

- The coding of incidents that occurred in the West Bank and Gaza Strip as separate from Israel.
- The removal of the “Target/Victim Entity” variables (*entity1*, *entity2*, *entity3*) due to redundancy with “Target/Victim Type” variables (*targtype1*, *targtype2*, *targtype3*).
- The replacement of “Perpetrator Group(s) Suspected/Unconfirmed” (*guncertain*) with group-specific versions of the same variable (*guncertain1*, *guncertain2*, *guncertain3*).

These changes have been applied retroactively to all relevant GTD data unless otherwise indicated.

Current Data Collection Methodology (2012-present)

In order to maximize the efficiency, accuracy, and completeness of GTD collection, the GTD team at START combines automated and manual data collection strategies. The process begins with a universe of over one million media articles on any topic published daily worldwide in order to identify the relatively small subset of articles that describe terrorist attacks. This is accomplished by applying customized keyword filters to the “fire hose” of media articles available through a subscription to the Metabase Application Programming Interface (API) provided by Lexis Nexis. The English-language content from Metabase is supplemented with articles accessed via API from BBC Monitoring, which includes English-language translations of sources from around 150 countries in over 100 languages. (Note: In the past the process included translated content from Open Source Enterprise). This filter isolates an initial pool of potentially relevant articles, approximately 400,000 per month. These articles are then processed using more sophisticated natural language processing (NLP) and machine learning techniques to further refine the results, remove duplicate articles, and identify articles that are likely to be relevant. The GTD team manually reviews this second subset of articles to identify the unique events that satisfy the GTD inclusion criteria and are subsequently researched and coded according to the specifications of the GTD Codebook. Each month, GTD researchers at START review approximately 8,000 - 16,000 articles and identify attacks to be added to the GTD.

The availability of valid source documents cannot be taken for granted and in fact varies considerably, often over time and by location. Because the validity of the data is critically important, the GTD team recognizes this variation and assesses the quality of the sources. Information from high-quality sources—those that are independent (free of influence from the government, political perpetrators, or corporations), those that routinely report externally verifiable content, and those that are primary rather than secondary—is prioritized over information from poor sources. *In order for an event to be recorded in the GTD it must be documented by at least one such high-quality source.* Events that are only documented by distinctly biased or unreliable sources are not included in the GTD, however the GTD does include certain information from potentially biased sources, such as perpetrator claims of responsibility or details about the motive of the attack. Note that particular scarcity of high-quality sources in certain geographic areas results in conservative documentation of attacks in those areas in the GTD.

The transition to entirely START-based data collection prompted the development of customized document management and data collection tools that streamline the process from beginning to end. The Data Management System (DMS) integrates the tasks of source article management and evaluation, case identification, and case coding into a single online platform. It applies state-of-the-art

- 将发生在西岸和加沙地带的事件编码为与以色列分开。
- 由于与“目标/受害者类型”变量（目标类型1、目标类型2、目标类型3）冗余，删除了“目标/受害者实体”变量（*entity1*、*entity2*、*entity3*）。
- 将“疑似/未确认的肇事者团体”（*guncertain*）替换为该变量的团体特定版本（*guncertain1*、*guncertain2*、*guncertain3*）。

除非另有说明，这些更改已追溯应用于所有相关的全球恐怖主义数据库数据。

当前数据收集方法（2012年至今）

为了最大限度地提高全球恐怖主义数据库收集的效率、准确性和完整性，START的全球恐怖主义数据库团队结合了自动和手动数据收集策略。该过程首先从全球每天发布的任何主题的超过一百万篇媒体文章开始，以识别描述恐怖袭击的相对较小的文章子集。这是通过将定制的关键词过滤器应用于通过Lexis Nexis提供的Metabase应用程序编程接口（API）订阅的媒体文章“数据流”来完成的。来自Metabase的英文内容通过BBC监测的API访问的文章进行补充，其中包括来自约150个国家、超过100种语言的来源的英文翻译。（注意：过去该过程包括来自开源企业的翻译内容）。该过滤器每月隔离出约40万篇可能相关的初始文章池。然后，使用更复杂的自然语言处理（NLP）和机器学习技术对这些文章进行处理，以进一步细化结果、删除重复文章并识别可能相关的文章。全球恐怖主义数据库团队手动审查第二个子集文章，以识别满足全球恐怖主义数据库纳入标准的独特事件，随后根据全球恐怖主义数据库代码手册的规范进行研究和编码。每月，START的全球恐怖主义数据库研究人员审查约8000至16000篇文章，并识别要添加到全球恐怖主义数据库中的攻击。

有效源文件的可用性不能被视为理所当然，实际上差异很大，通常随时间和地点而变化。由于数据的有效性至关重要，全球恐怖主义数据库团队认识到这种差异，并评估源文件的质量。来自高质量源文件的信息——那些独立的（不受政府、政治肇事者或公司影响的）、定期报告外部可验证内容的、以及是主要而非次要的源文件——优先于来自劣质源文件的信息。为了将事件记录在全球恐怖主义数据库中，它必须至少由一个这样的高质量源文件记录。仅由明显有偏见或不可靠源文件记录的事件不包括在全球恐怖主义数据库中，但全球恐怖主义数据库确实包含来自潜在偏见源文件的一些信息，例如肇事者的责任声明或袭击动机的细节。请注意，某些地理区域高质量源文件的缺乏导致全球恐怖主义数据库中这些区域的袭击记录较为保守。

向完全基于START的数据收集的转变推动了定制化文档管理和数据收集工具的开发，这些工具从头到尾简化了流程。数据管理系统 (DMS) 将源文章管理、评估、案例识别和案例编码等任务整合到一个在线平台中。它应用了最先进的技术

technologies to each stage of the data collection process, provides staff with a user-friendly interface tailored for GTD data collection, and supports a specialized coding strategy with several layers of quality control.

The coding strategy relies on six coding teams that each specialize on a particular domain of the GTD Codebook. The domains include location, perpetrators, targets, weapons and tactics, casualties and consequences, and general information. Each team is comprised of three to six undergraduate or graduate student interns led by a full-time research assistant, and is responsible for coding the domain-specific variables for each event in the GTD. The domain team leader is responsible for training and supervision of team members, and ensuring the quality of the coded data. This approach guarantees that each piece of information is coded and reviewed by someone who is closely familiar with the particular coding guidelines for the domain, as well as the relevant context. For example, the perpetrator domain team will have greater familiarity with active perpetrator organizations, their naming conventions, aliases, spelling variations, factions, and splinter organizations, making them well-suited to systematically record information on the organizations attributed responsibility for an attack.

Although the data collection process developed at the University of Maryland has improved the internal consistency and comprehensiveness of the GTD, as with any shift in data collection methodology it is critical to recognize the implications for analysis. The first year of data collected under the new process, 2012, represents a dramatic increase in the total number of worldwide terrorist attacks over 2011. Although this increase likely reflects recent patterns of terrorism, it is also partly a result of the improved efficiency of the data collection process. The use of automated approaches to document classification allows the GTD team to focus more time reviewing only those unique source articles that are classified as “relevant” by machine learning algorithms. As a result, the system has the capacity to include a much broader and deeper pool of media sources from around the world. It is also worth noting that the continuing rapid growth of the internet and news archives in particular makes a product like Metabase available to researchers, implicitly improving access to a greater variety of national and local sources. Despite consistency of the GTD definition of terrorism and inclusion criteria, this exponential growth of available source materials has allowed for the collection of more comprehensive data on terrorism than any previous effort. The GTD research team will continue to evaluate the impact of source availability on trends in the database to better advise users on important implications for analysis. We also continue to work to supplement the GTD “legacy” data back to 1970 to further improve its completeness. For more information on the current data collection methodology and its impact on the GTD, see the [START Discussion Point on The Benefits and Drawbacks of Methodological Advancements in Data Collection and Coding: Insights from the Global Terrorism Database \(GTD\)](#).

GTD Definition of Terrorism and Inclusion Criteria

The GTD defines a terrorist attack as *the threatened or actual use of illegal force and violence by a non-state actor to attain a political, economic, religious, or social goal through fear, coercion, or intimidation*. In practice this means in order to consider an incident for inclusion in the GTD, *all three* of the following attributes must be present:

于数据收集流程的每个阶段，为工作人员提供专为全球恐怖主义数据库数据收集定制的用户友好界面，并支持具有多层质量控制的专门编码策略。

编码策略依赖于六个编码团队，每个团队专门负责全球恐怖主义数据库代码手册中的一个特定领域。这些领域包括地点、肇事者、目标、武器与战术、伤亡与后果以及一般信息。每个团队由三至六名本科生或研究生实习生组成，由一名全职研究助理领导，负责为全球恐怖主义数据库中的每个事件编码领域特定变量。领域团队负责人负责培训和监督团队成员，并确保编码数据的质量。这种方法确保每条信息都由熟悉该领域特定编码指南及相关背景的人员进行编码和审查。例如，肇事者领域团队将更熟悉活跃的肇事者组织、其命名惯例、别名、拼写变体、派系和分裂组织，从而能够系统地记录被认定对袭击负责的组织信息。

尽管马里兰大学开发的数据收集流程提高了GTD的内部一致性和全面性，但与任何数据收集方法的转变一样，认识到对分析的影响至关重要。在新流程下收集数据的第一年，即2012年，全球恐怖袭击总数较2011年大幅增加。虽然这一增长可能反映了近期的恐怖主义趋势，但也部分归因于数据收集流程效率的提升。使用自动化方法进行文档分类，使GTD团队能够将更多时间集中在审查那些被机器学习算法分类为“相关”的独特源文章上。因此，该系统有能力纳入更广泛、更深入的全球媒体来源。还值得注意的是，互联网和新闻档案的持续快速增长使得像元数据库这样的产品可供研究人员使用，从而隐式地增加了对更多种类全国和地方来源的访问。尽管GTD恐怖主义定义和纳入标准保持一致，但这种可用源材料的指数级增长使得收集比以往任何努力都更全面的恐怖主义数据成为可能。GTD研究团队将继续评估来源可用性对数据库趋势的影响，以更好地为用户提供关于分析重要影响的建议。我们也在继续努力补充GTD“遗留”数据，回溯至1970年，以进一步提高其完整性。有关当前数据收集方法及其对GTD影响的更多信息，请参见[START讨论点：数据收集与编码方法学进步的利弊：来自全球恐怖主义数据库（GTD）的见解](#)。

GTD恐怖主义定义及纳入标准

全球恐怖主义数据库将恐怖袭击定义为非国家行为体为通过恐惧、胁迫或恐吓达到政治、经济、宗教或社会目标而威胁或实际使用非法武力和暴力。实际上，要将某个事件纳入全球恐怖主义数据库，必须同时满足以下三个属性：

- **The incident must be intentional** – the result of a conscious calculation on the part of a perpetrator.
- **The incident must entail some level of violence or immediate threat of violence** -including property violence, as well as violence against people.
- **The perpetrators of the incidents must be sub-national actors.** The database does not include acts of state terrorism.

In addition, *at least two* of the following three criteria must be present for an incident to be included in the GTD:

- **Criterion 1: The act must be aimed at attaining a political, economic, religious, or social goal.** In terms of economic goals, the exclusive pursuit of profit does not satisfy this criterion. It must involve the pursuit of more profound, systemic economic change.
- **Criterion 2: There must be evidence of an intention to coerce, intimidate, or convey some other message to a larger audience (or audiences) than the immediate victims.** It is the act taken as a totality that is considered, irrespective if every individual involved in carrying out the act was aware of this intention. As long as any of the planners or decision-makers behind the attack intended to coerce, intimidate or publicize, the intentionality criterion is met.
- **Criterion 3: The action must be outside the context of legitimate warfare activities.** That is, the act must be outside the parameters permitted by international humanitarian law, insofar as it targets non-combatants

Each of these latter three criteria filters can be applied to the database on the [GTD website](#) and the full data file.

Additional Filtering Mechanism: “Doubt Terrorism Proper?”

The inclusion criteria above are evaluated for each case to determine if it should be added to the GTD; however, there is often definitional overlap between terrorism and other forms of crime and political violence, such as insurgency, hate crime, and organized crime. Likewise, in many cases there is insufficient or conflicting information provided in source documents to allow coders to make a clear determination regarding whether or not the inclusion criteria are met. Such uncertainty, however, was not deemed to be sufficient to disqualify the incident from inclusion in the GTD. Users of the GTD can further filter the database by employing an additional terrorism definitional filter.

The “Doubt Terrorism Proper” field records reservation reported in source materials that the incident in question is *exclusively* terrorism. Furthermore, such a determination of doubt is subsequently coded by GTD analysts as conforming to one of five possible alternative designations: 1) Insurgency/Guerilla Action; 2) Other Crime Type; 3) Intra/Inter-group conflict; 4) Lack of Intentionality; or 5) State Actor. As is the case with the criteria filters outlined above, the “Doubt Terrorism Proper” filter is available for use on the [GTD website](#) and in the full data file. Note that the “Doubt Terrorism Proper” determination was only routinely made for incidents that occurred after 1997 and the “State Actor” was only routinely made for incidents that occurred after 2012.

- 事件必须是故意的 – 肇事者有意识的算计结果。
- 事件必须包含某种程度的暴力或直接的暴力威胁 -包括财产暴力以及对人的暴力。
- 事件的肇事者必须是次国家行为体。数据库不包括国家恐怖主义行为。

此外，一个事件必须满足至少两个以下三个 标准才能被纳入全球恐怖主义数据库：

- **标准1：行为必须旨在实现政治、经济、宗教或社会目标。**就经济目标而言，纯粹逐利不满足此标准，必须涉及更深层次的、系统性的经济变革。
- **标准2：必须有证据表明存在胁迫、恐吓或向比直接受害者更广泛的受众传递其他信息的意图。**考虑的是行为整体，无论实施该行为的每个个体是否意识到这一意图。只要袭击背后的任何策划者或决策者意图胁迫、恐吓或宣传，则满足意图性标准。
- **标准3：行为必须发生在合法战争活动背景之外。**也就是说，该行为必须超出国际人道法允许的范围，且其目标针对非战斗人员。

后面这三个标准过滤器均可应用于[全球恐怖主义数据库网站](#)和完整数据文件。

附加过滤机制：“是否怀疑为恐怖主义？”

上述纳入标准针对每个案例进行评估，以确定是否应将其纳入全球恐怖主义数据库；然而，恐怖主义与其他形式的犯罪和政治暴力（如叛乱、仇恨犯罪和有组织犯罪）之间常常存在定义上的重叠。同样，在许多情况下，源文件中提供的信息不足或相互矛盾，使得编码人员无法明确判断是否满足纳入标准。不过，这种不确定性并不足以将该事件排除在全球恐怖主义数据库之外。全球恐怖主义数据库的使用者可以通过应用额外的恐怖主义定义过滤器来进一步筛选数据库。

“怀疑是否为纯粹恐怖主义” 字段记录的是源材料中报告的关于相关事件是否纯粹是恐怖主义的保留意见。此外，这种怀疑的判定随后由GTD分析师编码为五种可能的替代标识之一：1) 叛乱/游击行动；2) 其他犯罪类型；3) 群体内/群体间冲突；4) 缺乏意图；或5) 国家行为体。与上述标准筛选条件一样，“怀疑是否为纯粹恐怖主义” 筛选器可在[GTD网站](#)和完整数据文件中使用。请注意，“怀疑是否为纯粹恐怖主义” 的判定仅针对1997年以后发生的事件进行常规记录，而“国家行为体” 仅针对2012年以后发生的事件进行常规记录。

Plots, Conspiracies, and Unsuccessful Attacks

The GTD does not include plots or conspiracies that are not enacted, or at least attempted. For an event to be included in the GTD, the attackers must be “out the door,” en route to execute the attack. Planning, reconnaissance, and acquiring supplies do not meet this threshold.

The GTD does include attacks that were attempted but ultimately unsuccessful. The circumstances vary depending on tactics (for details see the *success* variable, below). However, in general if a bomb is planted but fails to detonate; if an arsonist is intercepted by authorities before igniting a fire; or, if an assassin attempts and fails to kill his or her intended target, the attack is considered for inclusion in the GTD, and marked *success*=0.

Single Incident Determination

Incidents occurring in both the same geographic and temporal point will be regarded as a single incident, but if either the *time* of occurrence of incidents or their *locations* are *discontinuous*, the events will be regarded as separate incidents. Examples:

- *Four truck bombs explode nearly simultaneously in different parts of a major city.* This represents four incidents.
- *A bomb goes off, and while police are working on the scene the next day, they are attacked by terrorists with automatic weapons.* These are two separate incidents, as they were not continuous, given the time lag between the two events.
- *A group of militants shoot and kill five guards at a perimeter checkpoint of a petroleum refinery and then proceeds to set explosives and destroy the refinery.* This is one incident since it occurred in a single location (the petroleum refinery) and was one continuous event.
- *A group of hijackers diverts a plane to Senegal and, while at an airport in Senegal, shoots two Senegalese policemen.* This is one incident, since the hijacking was still in progress at the time of the shooting and hence the two events occurred at the same time in the same place.

If the information available for a complex event does not specify a time lag between, or the exact locations of, multiple terrorist activities, the event is a single incident. If any discontinuity in time or space is noted, the event is comprised of multiple incidents.

Citing the Global Terrorism Database

The GTD and the GTD Codebook are available to the public for the purpose of analyzing patterns of terrorism around the world. The recommended citations (adjusting style as needed) are:

START (National Consortium for the Study of Terrorism and Responses to Terrorism). (2021). *Global Terrorism Database (GTD)* [Data set]. University of Maryland. <https://www.start.umd.edu/gtd>

START (National Consortium for the Study of Terrorism and Responses to Terrorism). (2021, August). *Global Terrorism Database codebook: Methodology, inclusion criteria, and variables*. University of Maryland. <https://www.start.umd.edu/gtd/downloads/Codebook.pdf>

阴谋、密谋和未成功袭击

全球恐怖主义数据库不包含未实施或至少未尝试的阴谋或密谋。要将事件纳入全球恐怖主义数据库，攻击者必须“已出发”，在途中执行袭击。策划、侦察和获取物资不满足这一阈值。

全球恐怖主义数据库确实包括试图但最终未成功的袭击。具体情况因战术而异（详见下文成功变量）。然而，一般来说，如果炸弹被安置但未能引爆；如果纵火犯在点火前被当局拦截；或者，如果刺客试图刺杀预定目标但失败，该袭击将被视为纳入全球恐怖主义数据库，并标记为成功=0。

单一事件判定

发生在相同地理和时间点的事件将被视为单一事件，但如果事件的发生时间或地点是间断的，这些事件将被视为单独事件。示例：

- 四枚卡车炸弹几乎同时在一个大城市的不同地点爆炸。这代表了四起事件。
- 一枚炸弹爆炸，当警察次日正在现场工作时，遭到恐怖分子用自动武器袭击。这是两起单独的事件，因为两起事件之间存在时间滞后，不是连续的。
- 一群武装分子在炼油厂的周边检查站开枪打死五名狱警，然后安放炸药摧毁了炼油厂。这是一起事件，因为它发生在一个地点（炼油厂），并且是一个连续的事件。
- 一群劫机者将一架飞机劫持到塞内加尔，并在塞内加尔的一个机场开枪打伤两名塞内加尔警察。这是一起事件，因为劫持仍在进行中，两起事件在同一时间同一地点发生。

如果关于复杂事件的信息未说明多次恐怖活动之间的时间间隔或具体地点，则该事件为单一事件。如果注意到时间或空间上的任何间断，则该事件由多个事件组成。

引用全球恐怖主义数据库

全球恐怖主义数据库及其代码手册面向公众开放，用于分析全球恐怖主义模式。推荐的引用格式（根据需要调整风格）如下：

START（国家恐怖主义与反恐研究联盟）。(2021)。全球恐怖主义数据库（GTD）[数据集]。马里兰大学。 <https://www.start.umd.edu/gtd>

START（国家恐怖主义与反恐研究联盟）。(2021年8月)。全球恐怖主义数据库编码手册：方法论、纳入标准和变量。马里兰大学。 <https://www.start.umd.edu/gtd/downloads/Codebook.pdf>

DATABASE VARIABLES

I. GTD ID and Date

GTD ID
(eventid)
 Numeric Variable

Incidents from the GTD follow a 12-digit Event ID system.

- First 8 numbers – date recorded “yyyymmdd”.
- Last 4 numbers – sequential case number for the given day (0001, 0002 etc). This is “0001” unless there is more than one case occurring on the same date.

For example, an incident in the GTD occurring on 25 July 1993 would be numbered as “199307250001”. An additional GTD case recorded for the same day would be “199307250002”. The next GTD case recorded for that day would be “199307250003”, etc.

In rare cases, corrections to the date of a GTD attack are made. In order to maintain stable Event ID numbers, date changes are not reflected in the Event ID.

Year
(iyear)
 Numeric Variable

This field contains the year in which the incident occurred. In the case of incident(s) occurring over an extended period, the field will record the year when the incident was initiated.

Month
(imonth)
 Numeric Variable

This field contains the number of the month in which the incident occurred. In the case of incident(s) occurring over an extended period, the field will record the month when the incident was initiated.

For attacks that took place between 1970 and 2011, if the exact month of the event is unknown, this is recorded as “0.” For attacks that took place after 2011, if the exact month of the event is unknown, this is recorded as the midpoint of the range of possible dates reported in source materials and the full range is recorded in the Approximate Date (*approxdate*) field below.

Day
(iday)

数据库变量

一、GTD编号与日期

GTD编号
 (eventid) 数值变
 量

全球恐怖主义数据库中的事件采用12位事件标识符系统。

- 前8位数字——日期记录为 “yyyymmdd”。
- 后4位数字——给定日期的顺序案例编号（0001、0002等）。除非同一天发生多个案例，否则为 “0001”。

例如，1993年7月25日在全球恐怖主义数据库中发生的事件将编号为 “199307250001”。同一天记录的另一个全球恐怖主义数据库案例将为 “199307250002”。该天记录的下一个全球恐怖主义数据库案例将为 “199307250003”，依此类推。

在少数情况下，会对全球恐怖主义数据库袭击的日期进行修正。为保持事件标识符编号的稳定，日期变更不会反映在事件标识符中。

Year
 (iyear) 数值变量

此字段包含事件发生的年份。如果事件发生在较长时段内，该字段将记录事件开始的年份。

月份
 (imonth) 数值变量

此字段包含事件发生的月份数字。如果事件持续较长时间，则记录事件开始的月份。

对于发生在1970年至2011年之间的袭击，如果确切月份未知，则记录为 “0”。对于2011年之后发生的袭击，如果确切月份未知，则记录为源材料中报告的可能日期范围的中点，完整范围记录在下面的近似日期 (*approxdate*) 字段中。

Day
 (iday)

Numeric Variable

This field contains the numeric day of the month on which the incident occurred. In the case of incident(s) occurring over an extended period, the field will record the day when the incident was initiated.

For attacks that took place between 1970 and 2011, if the exact day of the event is unknown, this is recorded as “0.” For attacks that took place after 2011, if the exact day of the event is unknown, this is recorded as the midpoint of the range of possible dates reported in source materials and the full range is recorded in the Approximate Date (*approxdate*) field below.

Approximate Date
(*approxdate*)
Text Variable

Whenever the exact date of the incident is not known or remains unclear, this field is used to record the approximate date of the incident.

- If the *day* of the incident is not known, then the value for “Day” is “0”. For example, if an incident occurred in June 1978 and the exact day is not known, then the value for the “Day” field is “0” and the value for the “Approximate Date” field is “June 1978”.
- If the month is not known, then the value for the “Month” field is “0”. For example, if an incident occurred in the first half of 1978, and the values for the day and the month are not known, then the value for the “Day” and “Month” fields will both be “0” and the value for the “Approximate Date” field is “first half of 1978.”

Extended Incident?
(*extended*)
Categorical Variable

- | | |
|-----------|--|
| 1 = "Yes" | The duration of an incident extended more than 24 hours. |
| 0 = "No" | The duration of an incident extended less than 24 hours. |

Date of Extended Incident Resolution
(*resolution*)
Numeric Date Variable

This field only applies if “Extended Incident?” is “Yes” and records the date in which the incident was resolved (hostages released by perpetrators; hostages killed; successful rescue, etc.)

数值变量

此字段包含事件发生的月份中的数字日期。如果事件在较长时间内发生，该字段将记录事件开始的日期。

对于1970年至2011年间发生的袭击，如果事件的确切日期未知，则记录为“0”。对于2011年后发生的袭击，如果事件的确切日期未知，则记录为源材料中报告的可能日期范围的中点，完整范围记录在下面的近似日期 (*approxdate*) 字段中。

近似日期
(*approxdate*)
文本变量

当事件的确切日期未知或不明确时，此字段用于记录事件的近似日期。

- 如果事件发生的日期未知，则“日”的值为“0”。例如，如果事件发生在1978年6月，但确切日期未知，则“日”字段的值为“0”，“近似日期”字段的值为“1978年6月”。
- 如果月份未知，则“月”字段的值为“0”。例如，如果事件发生在1978年上半年，且日和月的值均未知，则“日”和“月”字段的值均为“0”，“近似日期”字段的值为“1978年上半年”。

扩展事件?
(扩展) 分类变量

- 1 = “是” ——事件持续时间超过24小时。0 = “否” ——事件持续时间不足24小时。

扩展事件解决日期
(分辨率) 数值日期变量

此字段仅适用于“扩展事件?”为“是”的情况，并记录事件解决的日期（人质被肇事者释放；人质被杀；成功营救等）。

II. Incident Information

Incident Summary
(summary)
Text Variable

A brief narrative summary of the incident, noting the “when, where, who, what, how, and why.”

Note: This field is presently only systematically available with incidents occurring after 1997.

Inclusion Criteria
(crit1, crit2, crit3)
Categorical Variables

These variables record which of the inclusion criteria (in addition to the necessary criteria) are met. This allows users to filter out those incidents whose inclusion was based on a criterion which they believe does not constitute terrorism proper. Note that for each of the criteria variables a case is coded as “1” if source information indicates that the criterion is met and “0” if source information indicates that the criterion is not met or that there is no indication that it is met.

Criterion 1: POLITICAL, ECONOMIC, RELIGIOUS, OR SOCIAL GOAL (CRIT1)

The violent act must be aimed at attaining a political, economic, religious, or social goal. This criterion is not satisfied in those cases where the perpetrator(s) acted out of a pure profit motive or from an idiosyncratic personal motive unconnected with broader societal change.

- 1 = "Yes" The incident meets Criterion 1.
- 0 = "No" The incident does not meet Criterion 1 or there is no indication that the incident meets Criterion 1.

Criterion 2: INTENTION TO COERCE, INTIMIDATE OR PUBLICIZE TO LARGER AUDIENCE(S) (CRIT2)

To satisfy this criterion there must be evidence of an intention to coerce, intimidate, or convey some other message to a larger audience (or audiences) than the immediate victims. Such evidence can include (but is not limited to) the following: pre- or post-attack statements by the perpetrator(s), past behavior by the perpetrators, or the particular nature of the target/victim, weapon, or attack type.

- 1 = "Yes" The incident meets Criterion 2.
- 0 = "No" The incident does not meet Criterion 2 or no indication.

II. 事件信息

事件摘要
(摘要) 文本变量

对事件的简短叙述性摘要，注明“时间、地点、人物、事件、方式及原因”。

注意：此字段目前仅对1997年之后发生的事件系统性地可用。

纳入标准
(crit1, crit2, crit3)
3) 分类变量

这些变量记录了满足哪些纳入标准（除必要标准外）。这使得使用者能够筛选出那些基于某种他们不认为属于真正恐怖主义的标准而被纳入的事件。请注意，对于每个标准变量，如果来源信息表明该标准得到满足，则案例编码为“1”；如果来源信息表明该标准未得到满足或没有迹象表明得到满足，则编码为“0”。

标准1：政治、经济、宗教或社会目标 (CRIT1)

暴力行为必须旨在实现政治、经济、宗教或社会目标。如果实施者是出于单纯盈利动机或与更广泛的社会变革无关的特殊个人动机行事，则不满足此标准。

- 1 = “是” 该事件符合标准1。0 = “否” 该事件不符合标准1，或没有迹象表明该事件符合标准1。

标准2：意图胁迫、恐吓或向更大范围受众宣传(CRIT2)

要满足此标准，必须有证据表明意图胁迫、恐吓或向比直接受害者更广泛的受众传达某种信息。此类证据可包括（但不限于）以下内容：实施者在袭击前或袭击后的声明、实施者的过往行为，或目标/受害者、武器或攻击类型的特定性质。

- 1 = "是" 事件满足标准2。0 = "否" 事件不满足标准2或没有指示。

Criterion 3: OUTSIDE INTERNATIONAL HUMANITARIAN LAW (CRIT3)

The action is outside the context of legitimate warfare activities, insofar as it targets non-combatants (i.e. the act must be outside the parameters permitted by international humanitarian law as reflected in the Additional Protocol to the Geneva Conventions of 12 August 1949 and elsewhere).

- 1 = "Yes" The incident meets Criterion 3.
- 0 = "No" The incident does not meet Criterion 3.

Doubt Terrorism Proper?
(doubtterr)
Categorical Variable

In certain cases there may be some uncertainty whether an incident meets all of the criteria for inclusion. In these ambiguous cases, where there is a strong possibility, but not certainty, that an incident represents an act of terrorism, the incident is included in GTD and is coded as “Yes” for this variable.

- 1 = "Yes" There is doubt as to whether the incident is an act of terrorism.
- 0 = "No" There is essentially no doubt as to whether the incident is an act of terrorism.

Note: This field is presently only systematically available with incidents occurring after 1997. If this variable was not included in the data collection process at the time the case was coded, “-9” is recorded in the database.

Alternative Designation
(alternative; alternative_txt)
Categorical Variable

This variable applies to only those cases coded as “Yes” for “Doubt Terrorism Proper?” (above). This variable identifies the most likely categorization of the incident other than terrorism.

- 1= Insurgency/Guerilla Action
- 2= Other Crime Type
- 3= Inter/Intra-Group Conflict
- 4= Lack of Intentionality
- 5= State Actors (systematically coded post-2012)

Note: This field is presently only systematically available with incidents occurring after 1997.

标准3：国际人道法之外 (CRIT3)

该行为发生在合法战争活动之外，且针对非战斗人员（即该行为必须超出1949年8月12日日内瓦公约附加议定书及其他文件所反映的国际人道法允许的范围）。

- 1 = "是" 该事件满足标准3。0 = "否" 该事件不满足标准3。

是否怀疑为恐怖主义？
(doubtterr)
分类变量

在某些情况下，可能不确定某一事件是否符合所有纳入标准。在这些模棱两可的情况下，如果事件极有可能（但不确定）构成恐怖主义行为，则该事件被纳入GTD，并在此变量中编码为“是”。

- 1 = "是" 事件是否属于恐怖主义行为存在疑问。0 = "否" 事件是否属于恐怖主义行为基本没有疑问。

注意：该字段目前仅系统地适用于1997年之后发生的事件。如果在案件编码时该变量未纳入数据收集流程，则在数据库中记录为“-9”。

替代标识
(替代; 替代_txt) 分类变量

此变量仅适用于在“怀疑是否为恐怖主义”（上文）中被编码为“是”的案件。该变量识别除恐怖主义之外事件最可能的类别归属。

- 1= 叛乱/游击行动2= 其他犯罪类型3= 群体间/群体内冲突4= 缺乏意图5= 国家行为者（2012年后系统编码）

注意：此字段目前仅针对1997年之后发生的事件系统可用。

Part of Multiple Incident
(multiple)
Categorical Variable

In those cases where several attacks are connected, but where the various actions do not constitute a single incident (either the time of occurrence of incidents or their locations are discontinuous – see Single Incident Determination section above), then “Yes” is selected to denote that the particular attack was part of a “multiple” incident.

- 1 = "Yes" The attack is part of a multiple incident.
- 0 = "No" The attack is not part of a multiple incident.

Note: This field is presently only systematically available with incidents occurring after 1997.

Related Incidents
(related)
Text Variable

When an attack is part of a coordinated, multi-part incident the GTD IDs of the related incidents are listed here, separated by commas.

Note: This field is presently only systematically available with incidents occurring after 1997.

III. Incident Location

Country
(country; country_txt)
Categorical Variable

This field identifies the *country* or *location* where the incident occurred. Separatist regions, such as Kashmir, Chechnya, South Ossetia, Transnistria, or Republic of Cabinda, are coded as part of the “home” country.

In the case where the country in which an incident occurred cannot be identified, it is coded as “Unknown.”

Note that the geo-political boundaries of many countries have changed over time. In a number of cases, countries that represented the location of terrorist attacks no longer exist; examples include West Germany, the USSR and Yugoslavia. In these cases the country name for the year the event occurred is recorded. As an example, a 1989 attack in Bonn would be recorded as taking place in West Germany (FRG). An identical attack in 1991 would be recorded as taking place in Germany.

多重事件的一部分
(多次)
分类变量

在那些多次攻击相互关联，但各种行动不构成单一事件的情况下（要么事件发生时
间不连续，要么地点不连续——参见上文“单一事件判定”部分），则选择“是”以
表示该特定袭击是“多次”事件的一部分。

- 1 = “是” 该袭击是多次事件的一部分。0 = “否” 该袭击
不是多次事件的一部分。

注：此字段 目前仅对1997年以后发生的事件有系统化的可用数据

相关事件（相关）
文本变量

当一次袭击是一个协调的多部分事件的一部分时，此处列出相关事件的全球恐怖主义数据库
标识符，以逗号分隔。

注：此字段目前仅对1997年以后发生的事件有系统化的可用数据。

三、事件地点

国家
(国家; 国家_txt) 分
类变量

此字段识别事件发生的国家或地点。分离主义地区，如克什米尔、车臣、南奥塞梯、德
涅斯特河沿岸或卡宾达共和国，被编码为“母国”的一部分。

如果无法确定事件发生的国家，则编码为“未知”。

请注意，许多国家的地缘政治边界随着时间的推移发生了变化。在一些情况下，代表恐
怖袭击地点的国家已不复存在；例如西德、苏联和南斯拉夫。在这些情况下，记录的是
事件发生年份的国家名称。例如，1989年在波恩发生的袭击将记录为发生在西德。
1991年发生的相同袭击将记录为发生在德国。

Thus, the following change dates apply:

BREAKUP OF CZECHOSLOVAKIA: Czech Republic – independence: 1 January 1993 Slovakia – independence: 1 January 1993	USSR terminates: 26 December 1991 – 5 January 1992
BREAKUP OF UNION OF SOVIET SOCIALIST REPUBLICS (USSR): Russian Federation – independence: 24 August 1991 Armenia – independence: 21 September 1991 Azerbaijan – independence: 30 August 1991 Belarus – independence: 25 August 1991 Estonia – independence: 17 September 1991 Georgia – independence: 9 April 1991 Kazakhstan – independence: 16 December 1991 Kyrgyzstan – independence: 31 August 1991 Latvia – independence: 21 August 1991 Lithuania – independence: 17 September 1991 Moldova – independence: 27 August 1991 Tajikistan – independence: 9 September 1991 Turkmenistan – independence: 27 October 1991 Ukraine – independence: 24 August 1991 Uzbekistan – independence: 1 September 1991	BREAKUP OF YUGOSLAVIA: Bosnia and Herzegovina – independence: 11 April 1992 Croatia – independence: 25 June 1991 Kosovo – UNMIK established: 10 June 1999 Macedonia – independence: 8 September 1991 Yugoslavia becomes Serbia-Montenegro: 4 February 2003 Montenegro – independence: 3 June 2006 Serbia – independence: 3 June 2006 Slovenia – independence: 25 June 1991
	BREAKUP OF CZECHOSLOVAKIA: Czech Republic – independence: 1 January 1993 Slovakia – independence: 1 January 1993
	OTHER: Eritrea – independence: 24 May 1993 Germany – unification: 3 October 1990

Country (Location) Codes
(Note: These codes are also used for the target/victim nationality fields. Entries marked with an asterisk (*) only appear as target/victim descriptors in the GTD.)

4 = Afghanistan	22 = Belize	41 = Central African Republic
5 = Albania	23 = Benin	42 = Chad
6 = Algeria	24 = Bermuda*	43 = Chile

Region

(region; region_txt)

Categorical Variable

This field identifies the region in which the incident occurred. The regions are divided into the following 12 categories, and dependent on the country coded for the case:

- 1 = North America
Canada, Mexico, United States
- 2 = Central America & Caribbean
Antigua and Barbuda, Bahamas, Barbados, Belize, Cayman Islands, Costa Rica, Cuba, Dominica, Dominican Republic, El Salvador, Grenada, Guadeloupe, Guatemala, Haiti, Honduras, Jamaica, Martinique, Nicaragua, Panama, St. Kitts and Nevis, St. Lucia, Trinidad and Tobago
- 3 = South America
Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Falkland Islands, French Guiana, Guyana, Paraguay, Peru, Suriname, Uruguay, Venezuela
- 4 = East Asia
China, Hong Kong, Japan, Macau, North Korea, South Korea, Taiwan
- 5 = Southeast Asia
Brunei, Cambodia, East Timor, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, South Vietnam, Thailand, Vietnam

地区

(地区; 地区_txt) 分

类变量

此字段标识事件发生的地区。地区分为以下12个类别，并取决于案件编码的国家：

- 1 = 北美洲 加拿大、墨西哥、美国
- 2 = 中美洲和加勒比地区 安提瓜和巴布达、巴哈马、巴巴多斯、伯利兹、开曼群岛、哥斯达黎加、古巴、多米尼克、多米尼加共和国、萨尔瓦多、格林纳达、瓜德罗普、危地马拉、海地、洪都拉斯、牙买加、马提尼克、尼加拉瓜、巴拿马、圣基茨和尼维斯、圣卢西亚、特立尼达和多巴哥
- 3 = 南美洲 阿根廷、玻利维亚、巴西、智利、哥伦比亚、厄瓜多尔、福克兰群岛、法属圭亚那、圭亚那、巴拉圭、秘鲁、苏里南、乌拉圭、委内瑞拉
- 4 = 东亚 中国、香港、日本、澳门、朝鲜、韩国、台湾
- 5 = 东南亚：文莱、柬埔寨、东帝汶、印度尼西亚、老挝、马来西亚、缅甸、菲律宾、新加坡、南越、泰国、越南

- 6 = South Asia

Afghanistan, Bangladesh, Bhutan, India, Maldives, Mauritius, Nepal, Pakistan, Sri Lanka
- 7 = Central Asia

Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, Uzbekistan
- 8 = Western Europe

Andorra, Austria, Belgium, Cyprus, Denmark, Finland, France, Germany, Gibraltar, Greece, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, United Kingdom, Vatican City, West Germany (FRG)
- 9 = Eastern Europe

Albania, Belarus, Bosnia-Herzegovina, Bulgaria, Croatia, Czech Republic, Czechoslovakia, East Germany (GDR), Estonia, Hungary, Kosovo, Latvia, Lithuania, Macedonia, Moldova, Montenegro, Poland, Romania, Russia, Serbia, Serbia-Montenegro, Slovak Republic, Slovenia, Soviet Union, Ukraine, Yugoslavia
- 10 = Middle East & North Africa

Algeria, Bahrain, Egypt, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Libya, Morocco, North Yemen, Qatar, Saudi Arabia, South Yemen, Syria, Tunisia, Turkey, United Arab Emirates, West Bank and Gaza Strip, Western Sahara, Yemen
- 11 = Sub-Saharan Africa

Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Central African Republic, Chad, Comoros, Democratic Republic of the Congo, Djibouti, Equatorial Guinea, Eritrea, Ethiopia, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Ivory Coast, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mozambique, Namibia, Niger, Nigeria, People's Republic of the Congo, Republic of the Congo, Rhodesia, Rwanda, Senegal, Seychelles, Sierra Leone, Somalia, South Africa, South Sudan, Sudan, Swaziland, Tanzania, Togo, Uganda, Zaire, Zambia, Zimbabwe
- 12 = Australasia & Oceania

Australia, Fiji, French Polynesia, New Caledonia, New Hebrides, New Zealand, Papua New Guinea, Solomon Islands, Vanuatu, Wallis and Futuna

Province / Administrative Region / State

(provstate)
Text Variable

This variable records the name (at the time of event) of the 1st order subnational administrative region in which the event occurs.

City
(city)
Text Variable

- 6 = 南亚 阿富汗, 孟加拉国, 不丹, 印度, 马尔代夫, 毛里求斯, 尼泊尔, 巴基斯坦, 斯里兰卡
- 7 = 中亚 亚美尼亚、阿塞拜疆、格鲁吉亚、哈萨克斯坦、吉尔吉斯斯坦、塔吉克斯坦、土库曼斯坦、乌兹别克斯坦
- 8 = 西欧 安道尔、奥地利、比利时、塞浦路斯、丹麦、芬兰、法国、德国、直布罗陀、希腊、冰岛、爱尔兰、意大利、卢森堡、马耳他、荷兰、挪威、葡萄牙、西班牙、瑞典、瑞士、英国、梵蒂冈、西德
- 9 = 东欧 阿尔巴尼亚、白俄罗斯、波斯尼亚和黑塞哥维那、保加利亚、克罗地亚、捷克共和国、捷克斯洛伐克、东德、爱沙尼亚、匈牙利、科索沃、拉脱维亚、立陶宛、马其顿、摩尔多瓦、黑山、波兰、罗马尼亚、俄罗斯、塞尔维亚、塞尔维亚和黑山、斯洛伐克共和国、斯洛文尼亚、苏联、乌克兰、南斯拉夫
- 10 = 中东和北非 阿尔及利亚、巴林、埃及、伊朗、伊拉克、以色列、约旦、科威特、黎巴嫩、利比亚、摩洛哥、北也门、卡塔尔、沙特阿拉伯、南也门、叙利亚、突尼斯、土耳其、阿拉伯联合酋长国、约旦河西岸和加沙地带、西撒哈拉、也门
- 11 = 撒哈拉以南非洲

安哥拉、贝宁、博茨瓦纳、布基纳法索、布隆迪、喀麦隆、中非共和国、乍得、科摩罗、刚果民主共和国、吉布提、赤道几内亚、厄立特里亚、埃塞俄比亚、加蓬、冈比亚、加纳、几内亚、几内亚比绍、科特迪瓦、肯尼亚、莱索托、利比里亚、马达加斯加、马拉维、马里、毛里塔尼亚、莫桑比克、纳米比亚、尼日尔、尼日利亚、刚果人民共和国、刚果共和国、罗得西亚、卢旺达、塞内加尔、塞舌尔、塞拉利昂、索马里、南非、南苏丹、苏丹、斯威士兰、坦桑尼亚、多哥、乌干达、扎伊尔、赞比亚、津巴布韦
- 12 = 澳大拉西亚和大洋洲 澳大利亚、斐济、法属波利尼西亚、新喀里多尼亚、新赫布列底、新西兰、巴布亚新几内亚、所罗门群岛、瓦努阿图、瓦利斯和富图纳

省 / 行政区 / 州

(省级行政区)
文本变量

该变量记录了事件发生时所在1st 级次国家级行政区的名称（以事件发生时的名称为准）。

City
(城市) 文本变量

This field contains the name of the city, village, or town in which the incident occurred. If the city, village, or town for an incident is unknown, then this field contains the smallest administrative area below *provstate* which can be found for the incident (e.g., district).

Vicinity
(vicinity)
Categorical Variable

- 1 = "Yes"
- The incident occurred in the immediate vicinity of the city in question.
- 0 = "No"
- The incident in the city itself.

Location Details
(location)
Text Variable

This field is used to specify additional information about the location of the incident.

Latitude
(latitude)
Numeric Variable

This field records the latitude (based on WGS1984 standards) of the *city* in which the event occurred.

Longitude
(longitude)
Numeric Variable

This field records the longitude (based on WGS1984 standards) of the *city* in which the event occurred.

Geocoding Specificity
(specificity)
Categorical Variable

This field identifies the geospatial resolution of the latitude and longitude fields. The most specific resolution uniformly available throughout the dataset is the center of the city, village, or town in which the attack occurred. Coordinates with greater resolution, while possible, are not systematically included in the database.

- 1 = event occurred in city/village/town and lat/long is for that location

此字段包含事件发生的城市、村庄或城镇的名称。如果事件的城市、村庄或城镇未知，则此字段包含可找到的事件发生地的最小行政区域（例如区），其级别低于省级行政区。

周边地区
(周边地区) 分类变量

- 1 = "是" 事件发生在所讨论城市的紧邻周边地区。0 = "否" 事件发生在城市本身。

位置详情
(地点)文本变量

此字段用于指定事件地点的附加信息。

纬度
(纬度) 数值变量

此字段记录事件发生所在城市的纬度（基于WGS1984标准）。

经度
(经度) 数值变量

此字段记录事件发生所在城市的经度（基于WGS1984标准）。

地理编码特异度
(具体性) 分类变量

该字段标识纬度和经度字段的地理空间分辨率。整个数据集中统一可用的最具体分辨率是发生袭击的城市、村庄或城镇的中心。虽然可能存在更高分辨率的坐标，但并未系统地纳入数据库。

- 1 = 事件发生在城市/村庄/城镇，经纬度对应那个地点

- 2 = event occurred in city/village/town and no lat/long could be found, so coordinates are for centroid of smallest subnational administrative region identified
- 3 = event did not occur in city/village/town, so coordinates are for centroid of smallest subnational administrative region identified
- 4 = no 2nd order or smaller region could be identified, so coordinates are for center of 1st order administrative region
- 5 = no 1st order administrative region could be identified for the location of the attack, so latitude and longitude are unknown

IV. Attack Information

Attack Type

(attacktype1; attacktype1_txt)
Categorical Variable

This field captures the general method of attack and often reflects the broad class of tactics used. It consists of nine categories, which are defined below. Up to three attack types can be recorded for each incident. Typically, only one attack type is recorded for each incident unless the attack is comprised of a sequence of events.

When multiple attack types may apply, the most appropriate value is determined based on the hierarchy below. For example, if an assassination is carried out through the use of an explosive, the Attack Type is coded as Assassination, not Bombing/Explosion. If an attack involves a sequence of events, then the first, the second, and the third attack types are coded in the order of the hierarchy below rather than the order in which they occurred.

- Attack Type Hierarchy:
- Assassination
 - Hijacking
 - Kidnapping
 - Barricade Incident
 - Bombing/Explosion
 - Armed Assault
 - Unarmed Assault
 - Facility/Infrastructure Attack
 - Unknown

1 = ASSASSINATION

An act whose primary objective is to kill one or more specific, prominent individuals. Usually carried out on persons of some note, such as high-ranking military officers, government officials, celebrities, etc. Not to include attacks on non-specific members of

- 2 = 事件发生在城市/村庄/城镇，但未能找到经纬度，因此坐标为所识别的次国家级行政区的中心点
- 3 = 事件未发生在城市/村庄/城镇，因此坐标为所识别的次国家级行政区的中心点
- 4 = 无法识别2nd 级或更小区域，因此坐标为所识别的1st级行政区的中心点
- 5 = 无法识别袭击地点的1st 级行政区，因此纬度和经度为未知

IV. 袭击信息

攻击类型

(attacktype1; attacktype1_txt) 分类变量

该字段记录了袭击的一般方法，并通常反映了战术的广泛类别。它包含九个类别，定义如下。每个事件最多可记录三种袭击类型。通常，每个事件只记录一种袭击类型，除非袭击由一系列事件组成。

当多种攻击类型可能适用时，根据以下层级确定最适当的值。例如，如果通过使用爆炸物进行暗杀，则攻击类型编码为暗杀，而非轰炸/爆炸。如果袭击涉及一系列事件，则第一、第二和第三攻击类型按照以下层级顺序编码，而非按其发生顺序。

- 攻击类型层级：暗杀 劫持 绑架 路障事件 轰炸/爆炸 武装袭击 非武装袭击 设施/基础设施 攻击 未知

1 = 暗杀

其主要目的是杀死一名或多名特定的知名人物的行为。通常针对具有一定知名度的人士，如高级军官、政府官员、名人等。不包括对非特定成员的攻击。

a targeted group. The killing of a police officer would be an armed assault unless there is reason to believe the attackers singled out a particularly prominent officer for assassination.

2 = ARMED ASSAULT

An attack whose primary objective is to cause physical harm or death directly to human beings by use of a firearm, incendiary, or sharp instrument (knife, etc.). Not to include attacks involving the use of fists, rocks, sticks, or other handheld (less-than-lethal) weapons. Also includes attacks involving certain classes of explosive devices *in addition to* firearms, incendiaries, or sharp instruments. The explosive device subcategories that are included in this classification are grenades, projectiles, and unknown or other explosive devices that are thrown.

3 = BOMBING/EXPLOSION

An attack where the primary effects are caused by an energetically unstable material undergoing rapid decomposition and releasing a pressure wave that causes physical damage to the surrounding environment. Can include either high or low explosives (including a dirty bomb) but does not include a nuclear explosive device that releases energy from fission and/or fusion, or an incendiary device where decomposition takes place at a much slower rate.

If an attack involves certain classes of explosive devices along with firearms, incendiaries, or sharp objects, then the attack is coded as an armed assault only. The explosive device subcategories that are included in this classification are grenades, projectiles, and unknown or other explosive devices that are thrown in which the bombers are also using firearms or incendiary devices.

4 = HIJACKING

An act whose primary objective is to take control of a vehicle such as an aircraft, boat, bus, etc. for the purpose of diverting it to an unprogrammed destination, force the release of prisoners, or some other political objective. Obtaining payment of a ransom should not be the sole purpose of a Hijacking, but can be one element of the incident so long as additional objectives have also been stated. Hijackings are distinct from Hostage Taking because the target is a vehicle, regardless of whether there are people/passengers in the vehicle.

5 = HOSTAGE TAKING (BARRICADE INCIDENT)

An act whose primary objective is to take control of hostages for the purpose of achieving a political objective through concessions or through disruption of normal operations. Such attacks are distinguished from kidnapping since the incident occurs and usually plays out at the target location with little or no intention to hold the hostages for an extended period in a separate clandestine location.

6 = HOSTAGE TAKING (KIDNAPPING)

针对目标群体的非特定成员。杀害一名警察属于武装袭击，除非有理由相信攻击者特意挑选了一名特别知名的官员进行暗杀。

2 = 武装袭击

其主要目标是通过使用枪械、燃烧武器或尖锐器具（刀等）直接对人员造成身体伤害或死亡的袭击。不包括使用拳头、石块、棍棒或其他手持（非致命）武器的袭击。还包括涉及某些类型的爆炸装置以及枪械、燃烧武器或尖锐器具的袭击。此类袭击中包括的爆炸装置子类别有：手榴弹、抛射物以及投掷的未知或其他爆炸装置。

3 = 轰炸/爆炸

一种袭击，其主要效果由高能不稳定材料快速分解并释放压力波，对周围环境造成物理损伤。可包括高爆炸药或低爆炸药（包括脏弹），但不包括通过核裂变和/或核聚变释放能量的核爆炸装置，也不包括分解速度慢得多的燃烧武器。

如果袭击涉及某些类别的爆炸装置以及枪械、燃烧武器或尖锐物体，则该袭击仅编码为武装袭击。属于此分类的爆炸装置子类别包括手榴弹、抛射物以及未知或其他爆炸装置，这些装置被投掷时，袭击者也同时使用枪械或燃烧武器。

4 = 劫持

一种行为，其主要目标是控制交通工具（如飞机、船只、公共汽车等），以将其改道至未计划的 destination、迫使释放囚犯或实现其他政治目的。索取赎金不应是劫持的唯一目的，但可以是事件的一个要素，前提是同时声明了其他目标。劫持不同于劫持人质，因为其目标是交通工具，无论车上是否有人/乘客。

5 = 劫持人质（路障事件）

主要目的是控制人质，通过让步或破坏正常运作来实现政治目标的行为。此类攻击与绑架不同，因为事件通常发生在目标地点并在此展开，很少或无意将人质长期关押在另一个秘密地点。

6 = 劫持人质（绑架）

An act whose primary objective is to take control of hostages for the purpose of achieving a political objective through concessions or through disruption of normal operations. Kidnappings are distinguished from Barricade Incidents (above) in that they involve moving and holding the hostages in another location.

7 = FACILITY / INFRASTRUCTURE ATTACK

An act, excluding the use of an explosive, whose primary objective is to cause damage to a non-human target, such as a building, monument, train, pipeline, etc. Such attacks include arson and various forms of sabotage (e.g., sabotaging a train track is a facility/infrastructure attack, even if passengers are killed). Facility/infrastructure attacks can include acts which aim to harm an installation, yet also cause harm to people incidentally (e.g. an arson attack primarily aimed at damaging a building, but causes injuries or fatalities).

8 = UNARMED ASSAULT

An attack whose primary objective is to cause physical harm or death directly to human beings by any means other than explosive, firearm, incendiary, or sharp instrument (knife, etc.). Attacks involving chemical, biological or radiological weapons are considered unarmed assaults.

9 = UNKNOWN

The attack type cannot be determined from the available information.

Second Attack Type

(attacktype2; attacktype2_txt)
Categorical Variable

This variable utilizes the hierarchy and attack type definitions listed above.

Third Attack Type

(attacktype3; attacktype3_txt)
Categorical Variable

This variable utilizes the hierarchy and attack type definitions listed above

Successful Attack

(success)
Categorical Variable

Success of a terrorist strike is defined according to the tangible effects of the attack. Success is *not* judged in terms of the larger goals of the perpetrators. For example, a bomb that exploded in a building would be counted as a success even if it did not succeed in bringing the building down or inducing government repression.

主要目的是控制人质，通过让步或破坏正常运作来实现政治目标的行为。绑架与路障事件（见上）的区别在于，绑架涉及将人质转移并关押在另一个地点。

7 = 设施/基础设施袭击

一种行为，排除使用爆炸物，其主要目标是造成非人类目标（如建筑物、纪念碑、火车、管道等）的损害。此类攻击包括纵火和各种形式的破坏（例如，破坏火车轨道属于设施/基础设施攻击，即使乘客死亡）。设施/基础设施攻击可以包括旨在损害设施的行为，但也可能附带造成人员伤害（例如，主要旨在破坏建筑物的纵火攻击，但造成受伤或死亡）。

8 = 非武装袭击

主要目标是通过爆炸物、枪械、燃烧武器或利器（刀等）以外的任何方式直接对人体造成身体伤害或死亡的袭击。涉及化学、生物或辐射武器的袭击被视为非武装袭击。

9 = 未知

无法从现有信息中确定袭击类型。

第二攻击类型

（袭击类型2；袭击类型2_txt）分类变量

该变量采用上述层级和袭击类型定义。

第三攻击类型

（袭击类型3；袭击类型3_txt）分类变量

此变量使用上述列出的层级和攻击类型定义

成功袭击

（成功）分类变量

恐怖袭击的成功定义为袭击的有形效果。成功是不根据肇事者的更大目标来评判的。例如，一栋建筑内爆炸的炸弹即使未能成功炸毁建筑或引发政府镇压，也会被视为成功。

The definition of a successful attack depends on the type of attack. Essentially, the key question is whether or not the attack type took place. If a case has multiple attack types, it is successful if any of the attack types are successful, with the exception of assassinations, which are only successful if the intended target is killed.

1 = "Yes" The incident was successful.
0 = "No" The incident was not successful.

ASSASSINATION

In order for an assassination to be successful, the target of the assassination must be killed. For example, even if an attack kills numerous people but not the target, it is an unsuccessful assassination.

ARMED ASSAULT

An armed assault is determined to be successful if the assault takes place and if a target is hit (including people and/or property). Unsuccessful armed assaults are those in which the perpetrators attack and do not hit the target. An armed assault is also unsuccessful if the perpetrators are apprehended on their way to commit the assault. To make this determination, however, there must be information to indicate that an actual assault was imminent.

BOMBING/EXPLOSION

A bombing is successful if the bomb or explosive device detonates. Bombings are considered unsuccessful if they do not detonate. The success or failure of the bombing is not based on whether it hit the intended target.

HIJACKING

A hijacking is successful if the hijackers assume control of the vehicle at any point, whereas a hijacking is unsuccessful if the hijackers fail to assume control of the vehicle. The success or failure of the hijacking is not based on whether the vehicle reached the intended destination of the hijackers.

HOSTAGE TAKING (BARRICADE INCIDENT)

A barricade incident is successful if the hostage takers assume control of the individuals at any point, whereas a barricade incident is unsuccessful if the hostage takers fail to assume control of the individuals.

HOSTAGE TAKING (KIDNAPPING)

A kidnapping is successful if the kidnappers assume control of the individuals at any point, whereas a kidnapping is unsuccessful if the kidnappers fail to assume control of the individuals.

FACILITY / INFRASTRUCTURE ATTACK

A facility attack is determined to be successful if the facility is damaged. If the facility has not been damaged, then the attack is unsuccessful.

成功袭击的定义取决于袭击类型。本质上，关键问题是袭击类型是否发生。如果某个案例包含多种袭击类型，只要其中任何一种袭击类型成功，该案例即为成功，但暗杀除外——暗杀仅在预定目标被杀害时才视为成功。

1 = "是" 事件成功。0 = "否" 事件未成功。

暗杀

为使暗杀成功，暗杀目标必须被杀死。例如，即使一次袭击造成多人死亡但未击中目标，仍属于未成功的暗杀。

武装袭击

如果袭击发生且目标被击中（包括人员和/或财产），则武装袭击被视为成功。不成功的武装袭击是指肇事者发动袭击但未击中目标。如果肇事者在前往实施袭击的途中被抓获，则武装袭击也被视为不成功。然而，做出这一判断必须有信息表明实际袭击即将发生。

轰炸/爆炸

如果炸弹或爆炸装置引爆，则轰炸成功。如果未引爆，则视为不成功。轰炸的成功与否不取决于是否击中预定目标。

劫持

如果劫机者在任何时刻控制了交通工具，则劫持成功；反之，如果劫机者未能控制交通工具，则劫持不成功。劫持的成功与否不取决于交通工具是否到达劫机者的预定目的地。

劫持人质（路障事件）

如果劫持者在任何时候控制了个人，则路障事件成功；如果劫持者未能控制个人，则路障事件失败。

劫持人质（绑架）

如果绑架者在任何时候控制了个人，则绑架成功；如果绑架者未能控制个人，则绑架失败。

设施/基础设施袭击

如果设施受到损坏，则设施攻击被视为成功。如果设施未受损坏，则攻击未成功。

UNARMED ASSAULT

An unarmed assault is determined to be successful there is a victim that who has been injured. Unarmed assaults that are unsuccessful are those in which the perpetrators do not injure anyone. An unarmed assault is also unsuccessful if the perpetrators are apprehended when on their way to commit the assault. To make this determination, however, there must be information to indicate that an assault was imminent.

Suicide Attack
(suicide)
Categorical Variable

This variable is coded “Yes” in those cases where there is evidence that the perpetrator did not intend to escape from the attack alive.

- 1 = "Yes" The incident was a suicide attack.
- 0 = "No" There is no indication that the incident was a suicide attack.

V. Weapon Information

Information on up to four types and sub-types of the weapons used in an attack are recorded for each case, in addition to any information on specific weapon details reported.

Weapon Type
(weaptype1; weaptype1_txt)
Categorical Variable

Up to four weapon types are recorded for each incident. This field records the general type of weapon used in the incident. It consists of the following categories:

- 1 = Biological
A weapon whose components are produced from pathogenic microorganisms or toxic substances of biological origins.
- 2 = Chemical
A weapon produced from toxic chemicals that is contained in a delivery system and dispersed as a liquid, vapor, or aerosol. This category includes chemical weapons delivered via explosive device.
- 3 = Radiological
A weapon whose components are produced from radioactive materials that emit ionizing radiation and can take many forms.

非武装袭击

如果存在受害者受伤，则非武装袭击被视为成功。非武装袭击未成功是指肇事者未造成任何人受伤。如果肇事者在前往实施袭击的途中被抓获，非武装袭击也视为未成功。然而，要做出这一判断，必须有信息表明袭击即将发生。

自杀式袭击
(自杀) 分类变量

若有证据表明肇事者不打算在袭击中幸存，则该变量编码为“是”。

1 = "是" 该事件是一次自杀式袭击。0 = "否" 没有迹象表明该事件是自杀式袭击。

五、武器信息

除有关具体武器细节的任何报告信息外，每个案件记录袭击中使用的所有四种类型和子类型的武器信息。

武器类型
(weaptype1; weaptype1_txt) 分类变量

每次事件记录最多四种武器类型。此字段记录事件中使用的一般武器类型。它包括以下类别：

- 1 = 生物
一种武器，其组件由病原微生物或生物源性有毒物质制成。
- 2 = 化学
一种由有毒化学品制成的武器，包含在投送系统中，以液体、蒸气或气溶胶形式散布。此类别包括通过爆炸装置投送的化学武器。
- 3 = 放射
一种武器，其组件由放射性材料制成，这些材料发射电离辐射，并可呈现多种形态。

- 4 = Nuclear

A weapon which draws its explosive force from fission, fusion, or a combination of these methods.
- 5 = Firearms

A weapon which is capable of firing a projectile using an explosive charge as a propellant.
- 6 = Explosives

A weapon composed of energetically unstable material undergoing rapid decomposition and releasing a pressure wave that causes physical damage to the surrounding environment. Note that chemical weapons delivered via explosive are classified as “Chemical” with weapon subtype “Explosives.”
- 7 = Fake Weapons

A weapon that was claimed by the perpetrator at the time of the incident to be real but was discovered after-the-fact to be non-existent or incapable of producing the desired effects.
- 8 = Incendiary

A weapon that is capable of catching fire, causing fire, or burning readily and produces intensely hot fire when exploded.
- 9 = Melee

A weapon—targeting people rather than property—that does not involve a projectile in which the user and target are in contact with it simultaneously.
- 10 = Vehicle

An automobile that is used in an incident that does not incorporate the use of explosives such as a car bomb or truck bomb.
- 11 = Sabotage Equipment

A weapon that is used in the demolition or destruction of property (e.g., removing bolts from a train tracks).
- 12 = Other

A weapon that has been identified but does not fit into one of the above categories.
- 13 = Unknown

The weapon type cannot be determined from the available information.

Weapon Sub-type
(*weapsubtype1; weapsubtype1_txt*)

- 4 = 核武器

一种从核裂变、核聚变或这些方法的组合中获取爆炸力的武器。
- 5 = 枪械

一种能够利用爆炸装药作为推进剂发射抛射物的武器。
- 6 = 炸药

一种由高能不稳定材料组成的武器，经过快速分解，释放出压力波，对周围环境造成物理损伤。注意，通过炸药投送的化学武器被归类为“化学武器”，武器子类型为“炸药”。
- 7 = 假武器

一种在事件发生时被肇事者声称是真实的武器，但事后被发现不存在或无法产生预期效果。
- 8 = 燃烧武器

一种能够着火、引起火灾或易于燃烧的武器，并在爆炸时产生极热的火焰。
- 9 = 近战武器

一种针对人员而非财产的武器，不涉及抛射物，使用者和目标同时与其接触。
- 10 = 交通工具

用于事件的汽车，不涉及爆炸物（如汽车炸弹或卡车炸弹）的使用。
- 11 = 破坏设备

用于拆除或财产破坏的武器（例如，从铁轨上移除螺栓）。
- 12 = 其他

一种已被识别但不属于上述类别的武器。
- 13 = 未知

根据现有信息无法确定武器类型。

武器子类型(*weapsubtype1; weapsubtype1_txt*)

Categorical Variable

This field records a more specific value for most of the Weapon Types identified immediately above.

The corresponding weapon sub-types for each primary weapon type are as follows:

Biological
[no corresponding weapon sub-types]

Chemical
1 = Poisoning
30 = Explosive

Radiological
[no corresponding weapon sub-types]

Nuclear
[no corresponding weapon sub-types]

Firearms
2 = Automatic or Semi-Automatic Rifle
3 = Handgun
4 = Rifle/Shotgun (non-automatic)
5 = Unknown Gun Type
6 = Other Gun Type

Explosives
7 = Grenade (not RPGs)
8 = Landmine
9 = Mail Bomb (letter, package, parcel)
10 = Pressure Trigger
11 = Projectile (e.g., rockets, mortars, RPGs, missiles)
12 = Remote Device (trigger, control, detonate)
13 = Suicide (carried bodily by human being)
14 = Time Fuse
15 = Vehicle
16 = Unknown Explosive Type
17 = Other Explosive Type
28 = Dynamite/TNT
29 = Sticky Bomb
31 = Pipe Bomb

Fake Weapons

分类变量

此字段记录上面识别的多数武器类型的更具体值。

每 种主要武器类型对应的武器子类型如下ws:

生物
[无对应武器子类型]

化学
1 = 投毒30 =
爆炸物

放射
[无对应武器子类型]

核武器
[没有对应的武器子类型]

枪械
2 = 自动或半自动步枪3 = 手枪4 = 步
枪/霰弹枪（非自动）5 = 未知枪械
类型6 = 其他枪械类型

炸药
7 = 手榴弹（非火箭筒）8 = 地雷9 = 邮件炸弹（信
件、包裹、邮包）10 = 压力触发装置11 = 抛射物
（例如火箭弹、迫击炮、火箭筒、导弹）12 = 遥
控装置（触发、控制、引爆）13 = 自杀（由人体
携带）14 = 定时引信15 = 交通工具16 = 未知爆炸
物类型17 = 其他爆炸物类型28 = 炸药/TNT29 = 粘
性炸弹31 = 管状炸弹

假武器

[no corresponding weapon sub-types]

Incendiary

Weapon Details
(*weapdetail*)
Text Variable

This field notes any pertinent information on the type of weapon(s) used in the incident. Such notes could include the novel use or means of concealing a weapon, specific weapon models, interesting details of the weapons’ origins, etc.

VI. Target/Victim Information

Information on up to three targets/victims is recorded for each incident. The target/victim information fields coded for each of the three targets include type, name of entity, specific target/victim, and nationality of the target/victim. The field contains information on both intended targets and incidental bystanders, and therefore, intentionality should be carefully considered.

Target/Victim Type
(*targtype1; targtype1_txt*)
Categorical Variable

The target/victim type field captures the general type of target/victim. When a victim is attacked specifically *because of his or her relationship* to a particular person, such as a prominent figure, the target type reflects that motive. For example, if a family member of a

武器详情
(*weapdetail*)
文本变量

该字段记录了关于事件中所用武器类型的任何相关信息。此类信息可包括武器的新颖使用方式或隐藏手段、具体武器型号、武器来源的有趣细节等。

VI. 目标/受害者信息

每个事件最多记录三个目标/受害者的信息。针对这三个目标中的每一个，编码的目标/受害者信息字段包括类型、实体名称、具体目标/受害者以及目标/受害者的国籍。该字段包含关于预定目标和偶然旁观者的信息，因此应仔细考虑意图性。

目标/受害者类型
(targtype1; targtype1_
txt) 分类变量

目标/受害者类型字段捕捉目标/受害者的一般类型。当受害者因与特定人物（如知名人士）的关系而受到袭击时，目标类型反映该动机。例如，如果某位知名人士的家属

government official is attacked because of his or her relationship to that individual, the type of target is “government.” This variable consists of the following 22 categories:

1 = BUSINESS

Businesses are defined as individuals or organizations engaged in commercial or mercantile activity as a means of livelihood. Any attack on a business or private citizens patronizing a business such as a restaurant, gas station, music store, bar, café, etc.

This includes attacks carried out against corporate offices or employees of firms like mining companies, or oil corporations. Furthermore, includes attacks conducted on business people or corporate officers. Included in this value as well are hospitals and chambers of commerce and cooperatives.

Does not include attacks carried out in public or quasi-public areas such as “business district or commercial area”, or generic business-related individuals such as “businessmen” (these attacks are captured under “Private Citizens and Property”, see below.) Also does not include attacks against generic business-related individuals such as “businessmen.” Unless the victims were targeted because of their specific business affiliation, these attacks belong in “Private Citizens and Property.”

2 = GOVERNMENT (GENERAL)

Any attack on a government building; government member, former members, including members of political parties in official capacities, their convoys, or events sponsored by political parties; political movements; or a government sponsored institution where the attack is expressly carried out to harm the government.

This value includes attacks on judges, public attorneys (e.g., prosecutors), courts and court systems, politicians, royalty, head of state, government employees (unless police or military), election-related attacks, or intelligence agencies and spies.

This value does not include attacks on political candidates for office or members of political parties that do not hold an elected office (these attacks are captured in “Private Citizens and Property”).

3 = POLICE

This value includes attacks on members of the police force or police installations; this includes police boxes, patrols headquarters, academies, cars, checkpoints, etc. Includes attacks against jails or prison facilities, or jail or prison staff or guards.

4 = MILITARY

Includes attacks against military units, patrols, barracks, convoys, jeeps, and aircraft. Also includes attacks on recruiting sites, and soldiers engaged in internal policing functions such as at checkpoints and in anti-narcotics activities. This category also includes peacekeeping units that conduct military operations (e.g., AMISOM)

如果政府官员因其与该个人的关系而遭到袭击，则目标类型为“政府”。该变量包含以下22个类别：

1 = 商业

商业被定义为从事商业或贸易活动作为谋生手段的个体或组织。任何对商业场所或光顾商业场所的私人公民（如餐厅、燃气站、音乐商店、酒吧、咖啡馆等）的袭击。

这包括针对公司办公室或矿业公司、石油公司等企业雇员的袭击。此外，还包括针对商人或公司官员的袭击。此类别还包括医院、商会和合作社。

不包括在公共或准公共区域（如“商业区或商业区”）进行的袭击，或针对一般商业相关个人（如“商人”）的袭击（这些袭击归入“私人公民与财产”，见下文）。也不包括针对一般商业相关个人（如“商人”）的袭击。除非受害者因其特定商业关系成为目标，否则这些袭击属于“私人公民与财产”。

2 = 政府（一般）

对政府建筑、政府成员（包括以官方身份履职的政党成员）、前成员、其车队、政党主办的活动、政治运动或政府赞助机构的任何袭击，且袭击明确旨在伤害政府。

该值包括针对法官、公共检察官（如公诉人）、法院和法院系统、政治家、王室、国家元首、政府雇员（除非是警察或军事人员）、选举相关袭击，或情报机构和间谍的袭击。

该值不包括针对公职候选人或不担任民选职务的政党成员的袭击（这些袭击归入“私人公民与财产”）。

3 = 警察

该值包括对警察部队或警察设施的袭击；这包括警察岗亭、巡逻总部、警察学院、汽车、检查站等。包括对监狱或监狱设施，或监狱工作人员或狱警的袭击。

4 = 军事

包括对军事单位、巡逻队、兵营、车队、吉普车和飞机的袭击。还包括对征兵点和从事内部治安职能（如在检查站和禁毒活动中）的士兵的袭击。此类别也包括进行军事行动的维和部队（如非索特派团）。

Excludes attacks against non-state militias and guerrillas, these types of attacks are coded as “Terrorist/Non-state Militias” see below.

5 = ABORTION RELATED

Attacks on abortion clinics, employees, patrons, or security personnel stationed at clinics.

6 = AIRPORTS & AIRCRAFT

An attack that was carried out either against an aircraft or against an airport. Attacks against airline employees while on board are also included in this value.

Includes attacks conducted against airport business offices and executives. Military aircraft are not included.

7 = GOVERNMENT (DIPLOMATIC)

Attacks carried out against foreign missions, including embassies, consulates, etc.

This value includes cultural centers that have diplomatic functions, and attacks against diplomatic staff and their families (when the relationship is relevant to the motive of the attack) and property. The United Nations is a diplomatic target.

8 = EDUCATIONAL INSTITUTION

Attacks against schools, teachers, or guards protecting school sites. Includes attacks against university professors, teaching staff and school buses. Moreover, includes attacks against religious schools in this value.

As noted below in the “Private Citizens and Property” value, the GTD has several attacks against students. If attacks involving students are not expressly against a school, university or other educational institution or are carried out in an educational setting, they are coded as private citizens and property.

Excludes attacks against military schools (attacks on military schools are coded as “Military,” see below).

9 = FOOD OR WATER SUPPLY

Attacks on food or water supplies or reserves are included in this value. This generally includes attacks aimed at the infrastructure related to food and water for human consumption.

10 = JOURNALISTS & MEDIA

Includes, attacks on reporters, news assistants, photographers, publishers, as well as attacks on media headquarters and offices.

Attacks on transmission facilities such as antennae or transmission towers, or broadcast infrastructure are coded as “Telecommunications,” see below.

不包括对非国家民兵和游击队的袭击，这些类型的袭击被编码为“恐怖分子/非国家民兵”，见

5 = 堕胎相关

对堕胎 诊所、雇员、顾客或驻诊安保人员的攻击

6 = 机场与飞机

针对飞机或机场实施的袭击。在机上对航空公司雇员的攻击也包含在此值中。

包括针对机场商务办公室和高管实施的袭击。军用飞机不包括在内。

7 = 政府（外交）

Attac ，包括大使馆、领事馆等。

此值包括具有外交功能的文化中心，以及针对外交人员及其家属（当关系与袭击动机相关时）和财产的袭击。联合国是一个外交目标。

8 = 教育机构

针对学校、教师或保护学校场地的警卫的袭击。包括针对大学教授、教学人员和校车的袭击。此外，此值还包括针对宗教学校的袭击。

如下文“私人公民与财产”值所述，全球恐怖主义数据库有若干针对学生的袭击。如果涉及学生的袭击并非明确针对学校、大学或其他教育机构，或未在教育场所实施，则编码为私人公民与财产。

排除针对军事学校的袭击（针对军事学校的袭击编码为“军事”，见下文）。

9 = 食品或水供应

对食物或水供应或储备的攻击属于此值。这通常包括针对人类消费所需食物和水基础设施的攻击。

10 = 记者与媒体

包括对记者、新闻助理、摄影师、出版商的攻击，以及对媒体总部和办公室的攻击。

对天线或传输塔等传输设施，或广播基础设施的袭击被编码为“电信”，详见下文。

11 = MARITIME (INCLUDES PORTS AND MARITIME FACILITIES)

Includes civilian maritime: attacks against fishing ships, oil tankers, ferries, yachts, etc. (Attacks on fishermen are coded as “Private Citizens and Property,” see below).

12 = NGO

Includes attacks on offices and employees of non-governmental organizations (NGOs). NGOs here include large multinational non-governmental organizations such as the Red Cross and Doctors without Borders, as well as domestic organizations.

Does not include labor unions, social clubs, student groups, and other non-NGO (such cases are coded as “Private Citizens and Property”, see below).

13= OTHER

This value includes acts of terrorism committed against targets which do not fit into other categories. Some examples include ambulances, firefighters, and international demilitarized zones.

14= PRIVATE CITIZENS & PROPERTY

This value includes attacks on individuals, the public in general or attacks in public areas including markets, commercial streets, busy intersections and pedestrian malls.

Also includes ambiguous cases where the target/victim was a named individual, or where the target/victim of an attack could be identified by name, age, occupation, gender or nationality. This value also includes ceremonial events, such as weddings and funerals.

The GTD contains a number of attacks against students. If these attacks are not expressly against a school, university or other educational institution or are not carried out in an educational setting, these attacks are coded using this value. Also, includes incidents involving political supporters as private citizens and property, provided that these supporters are not part of a government-sponsored event. Finally, this value includes police informers.

Does not include attacks causing civilian casualties in businesses such as restaurants, cafes or movie theaters (these categories are coded as “Business” see above).

15 = RELIGIOUS FIGURES/INSTITUTIONS

This value includes attacks on religious leaders, (Imams, priests, bishops, etc.), religious institutions (mosques, churches), religious places or objects (shrines, relics, etc.). This value also includes attacks on organizations that are affiliated with religious entities that are not NGOs, businesses or schools.

Attacks on religious pilgrims are considered “Private Citizens and Property;” attacks on missionaries are considered religious figures.

11 = 海上（包括港口和海上设施）

包括民用海事：针对渔船、油轮、渡轮、游艇等的攻击（对渔民的攻击编码为“私人公民与财产”，详见下文）。

12 = 非政府组织

包括对非政府组织（NGOs）办公室和雇员的袭击。此处的非政府组织包括大型多国非政府组织，如红十字会和无国界医生，以及国内组织。

不包括工会、社交俱乐部、学生团体及其他非非政府组织（此类情况编码为“私人公民与财产”，见下文）。

13= 其他

此值包括针对不适合其他类别目标的恐怖主义行为。一些例子包括救护车、消防员和国际非军事区。

14= 私人公民和财产

此值包括针对个人、普通公众或在公共区域（包括市场、商业街、繁忙路口和步行街）的攻击。

还包括目标/受害者是具名个人，或可以通过姓名、年龄、职业、性别或国籍识别攻击目标/受害者的模糊情况。此值还包括仪式性活动，如婚礼和葬礼。

GTD 包含多起针对学生的攻击。如果这些攻击并非明确针对学校、大学或其他教育机构，也未发生在教育场所，则使用此值编码。此外，还包括涉及作为私人公民与财产的政治支持者的事件，前提是这些支持者并非参加政府赞助活动。最后，此值还包括警方线人。

不包括导致餐厅、咖啡馆或电影院等商业场所平民伤亡的攻击（这些类别编码为“商业”，见上文）。

15 = 宗教人物/机构

此值包括对宗教领袖（如伊玛目、牧师、主教等）、宗教机构（清真寺、教堂）、宗教场所或物品（圣地、圣物等）的攻击。此值也包括对与非政府组织、商业或学校无关的宗教实体附属组织的攻击。

对宗教朝圣者的袭击被视为“私人公民与财产”；对传教士的袭击被视为宗教人物。

16 = TELECOMMUNICATION

This includes attacks on facilities and infrastructure for the transmission of information. More specifically this value includes things like cell phone towers, telephone booths, television transmitters, radio, and microwave towers.

17 = TERRORISTS/NON-STATE MILITIAS

Terrorists or members of identified terrorist groups within the GTD are included in this value. Membership is broadly defined and includes informants for terrorist groups, but excludes former or surrendered terrorists.

This value also includes cases involving the targeting of militias and guerillas.

18 = TOURISTS

This value includes the targeting of tour buses, tourists, or “tours.” Tourists are persons who travel primarily for the purposes of leisure or amusement. Government tourist offices are included in this value.

The attack must clearly target tourists, not just an assault on a business or transportation system used by tourists. Travel agencies are coded as business targets.

19 = TRANSPORTATION (OTHER THAN AVIATION)

Attacks on public transportation systems are included in this value. This can include efforts to assault public buses, minibuses, trains, metro/subways, highways (if the highway itself is the target of the attack), bridges, roads, etc.

The GTD contains a number of attacks on generic terms such as “cars” or “vehicles.” These attacks are assumed to be against “Private Citizens and Property” unless shown to be against public transportation systems. In this regard, buses are assumed to be public transportation unless otherwise noted.

20 = UNKNOWN

The target type cannot be determined from the available information.

21 = UTILITIES

This value pertains to facilities for the transmission or generation of energy. For example, power lines, oil pipelines, electrical transformers, high tension lines, gas and electric substations, are all included in this value. This value also includes lampposts or street lights.

Attacks on officers, employees or facilities of utility companies excluding the type of facilities above are coded as business.

22 = VIOLENT POLITICAL PARTIES

16 = 电信

这包括对信息传输设施和基础设施的袭击。更具体地说，此值包括诸如手机信号塔、电话亭、电视发射器、广播和微波塔等设施。

17 = 恐怖分子/非国家民兵

此值包括全球恐怖主义数据库中认定的恐怖分子或已识别恐怖组织的成员。成员定义广泛，包括恐怖组织的线人，但不包括前恐怖分子或已投降的恐怖分子。

该值还包括针对民兵和游击队的案件。

18 = 游客

该值包括针对旅游巴士、游客或“旅行团”的目标。游客主要出于休闲或娱乐目的而旅行。政府旅游办事处包含在此值中。

攻击必须明确以游客为目标，而不仅仅是对游客使用的商业或交通系统进行袭击。旅行社被编码为商业目标。

19 = 运输（航空除外）

对公共交通系统的攻击包含在此值中。这可能包括袭击公共汽车、小巴、火车、地铁/地铁、高速公路（如果高速公路本身是攻击目标）、桥梁、道路等。

全球恐怖主义数据库包含针对“汽车”或“交通工具”等通用术语的攻击。除非证明是针对公共交通系统，否则这些攻击假定针对“私人公民与财产”。在这方面，除非另有说明，公共汽车假定为公共交通工具。

20 = 未知

根据现有信息无法确定目标类型。

21 = 公用事业

此值涉及能源传输或生产设施。例如，电力线、石油管道、变压器、高压线、燃气和变电站均包含在此值中。此值还包括路灯柱或路灯。

针对公用事业公司的官员、雇员或设施的袭击（不包括上述设施类型）被编码为商业。

22 = 暴力政党

This value pertains to entities that are both political parties (and thus, coded as “government” in this coding scheme) *and* terrorists. It is operationally defined as groups that engage in electoral politics and appear as “Perpetrators” in the GTD.

Target/Victim Subtype

(*targsubtype1; targsubtype1_txt*)
Categorical Variable

The target subtype variable captures the more specific target category and provides the next level of designation for each target type. If a target subtype is not applicable this variable is left blank.

The subtypes for each target type are as follows:

Business

- 1 = Gas/Oil/Electric
- 2 = Restaurant/Bar/Café
- 3 = Bank/Commerce
- 4 = Multinational Corporation
- 5 = Industrial/Textiles/Factory
- 6 = Medical/Pharmaceutical
- 7 = Retail/Grocery/Bakery (including cell phone shops and generic shops)
- 8 = Hotel/Resort
- 9 = Farm/Ranch
- 10 = Mining
- 11 = Entertainment/Cultural/Stadium/Casino
- 12 = Construction
- 13 = Private Security Company/Firm
- 112 = Legal Services

Government (General)

- 14 = Judges/Attorneys/Courts
- 15 = Politician or Political Party Movement/Meeting/Rally
- 16 = Royalty
- 17 = Head of State
- 18 = Government Personnel (excluding police, military)
- 19 = Election-related
- 20 = Intelligence
- 21 = Government Buildings/Facility/Office

Police

- 22 = Police Buildings (Headquarters/Stations/School)

该值涉及既是政党（因此在此编码方案中被编码为“政府”）又是恐怖分子的实体。其操作性定义为参与选举政治并在全球恐怖主义数据库中显示为“肇事者”的团体。

目标/受害者子类型

(目标子类型1; 目标子类型1_
txt)分类变量

目标子类型变量捕捉更具体的目标类别，并为每个目标类型提供下一级指定。如果目标子类型不适用，则此变量留空。

每个目标类型的子类型如下：

商业

- 1 = 天然气/石油/电力
- 2 = 餐厅/酒吧/咖啡馆
- 3 = 银行/商业
- 4 = 跨国公司
- 5 = 工业/纺织/工厂
- 6 = 医疗/制药
- 7 = 零售/杂货/面包店（包括手机店和普通商店）
- 8 = 酒店/度假村
- 9 = 农场/牧场
- 10 = 采矿
- 11 = 娱乐/文化/体育场/赌场
- 12 = 建筑
- 13 = 私人保安公司
- 112 = 法律服务

政府（一般）

- 14 = 法官/律师/法院
- 15 = 政治家或政党运动/会议/集会
- 16 = 王室
- 17 = 国家元首
- 18 = 政府人员（不包括警察、军事）
- 19 = 选举相关
- 20 = 情报
- 21 = 政府大楼/设施/办公室

警察

- 22 = 警察大楼（总部/车站/学校）

23 = Police Patrol (including vehicles and convoys)
24 = Police Checkpoint
25 = Police Security Forces/Officers
26 = Prison/Jail

Military

27 = Military Barracks/Base/Headquarters/Checkpoint
28 = Military Recruiting Station/Academy
29 = Military Unit/Patrol/Convoy
30 = Military Weaponry
31 = Military Aircraft
32 = Military Maritime
33 = Non-combatant Personnel
34 = Military Personnel (soldiers, troops, officers, forces)
35 = Military Transportation/Vehicle (excluding convoys)
36 = Military Checkpoint
37 = North Atlantic Treaty Organization (NATO) Related
39 = Paramilitary

Abortion Related

40 = Clinics
41 = Personnel

Airports & Aircraft

42 = Aircraft (not at an airport)
43 = Airline Officer/Personnel
44 = Airport

Government (Diplomatic)

45 = Diplomatic Personnel (outside of embassy, consulate)
46 = Embassy/Consulate
47 = International Organization (peacekeeper, aid agency, compound)

Educational Institution

48 = Teacher/Professor/Instructor
49 = School/University/Educational Building
50 = Other Personnel

Food and Water Supply

51 = Food Supply
52 = Water Supply

Journalists & Media

53 = Newspaper Journalist/Staff/Facility

23 = 警察巡逻（包括车辆和车队） 24 = 警察检查站
25 = 警察安全部队/官员 26 = 监狱/拘留所

军事

27 = 军事营区/基地/总部/检查站 28 = 军事招募站/学院
29 = 军事单位/巡逻队/车队 30 = 军事武器 31 = 军用飞机
32 = 军事海事 33 = 非战斗人员 34 = 军事人员（士兵、部队、官员、军队）
35 = 军事运输车辆（不包括车队） 36 = 军事检查站
37 = 北大西洋公约组织（北约）相关 39 = 准军事组织

堕胎相关

40 = 诊所 41 = 人

机场与飞机

42 = 飞机（不在机场） 43 = 航空官员/人员
44 = 机场

政府（外交）

45 = 外交人员（在大使馆、领事馆外） 46 = 大使馆/领事馆
47 = 国际组织（维和人员、援助机构、大院）

教育机构

48 = 教师/教授/讲师 49 = 学校/大学/教育建筑
50 = 其他人员

食品和水供应

51 = 食品供应
52 = 供水

记者与媒体

53 = 报社记者/工作人员/设施

54 = Radio Journalist/Staff/Facility
55 = Television Journalist/Staff/Facility
56 = Other (including online news agencies)

Maritime

57 = Civilian Maritime
58 = Commercial Maritime
59 = Oil Tanker
60 = Port

NGO

61 = Domestic NGO
62 = International NGO

Other

63 = Ambulance
64 = Fire Fighter/Truck
66 = Demilitarized Zone (including Green Zone)

Private Citizens & Property

65 = Refugee (including Camps/IDP/Asylum Seekers)
67 = Unnamed Civilian/Unspecified
68 = Named Civilian
69 = Religion Identified
70 = Student
71 = Race/Ethnicity Identified
72 = Farmer
73 = Vehicles/Transportation
74 = Marketplace/Plaza/Square
75 = Village/City/Town/Suburb
76 = House/Apartment/Residence
77 = Laborer (General)/Occupation Identified
78 = Procession/Gathering (funeral, wedding, birthday, religious)
79 = Public Areas (e.g., Public garden, parking lot, garage, beach, public buildings, camps)
80 = Memorial/Cemetery/Monument
81 = Museum/Cultural Center/Cultural House
82 = Labor Union Related
83 = Protester
84 = Political Party Member/Rally
113 = Alleged Informant

Religious Figures/Institutions

85 = Religious Figure
86 = Place of Worship

54 = 广播记者/员工/设施55 = 电视记者/
员工/设施56 = 其他（包括在线新闻机构）

海事

57 = 民用海事58 = 商业
海事59 = 油轮60 = 港口

实体名称
(corp1) 文本变
量

This is the name of the corporate entity or government agency that was targeted. If the element targeted is unspecified, “Unknown” is listed. If no specific entity was targeted, “Not Applicable” is recorded.

Specific Target/Victim
(target1)
Text Variable

This is the specific person, building, installation, etc., that was targeted and/or victimized and is a part of the entity named above. (For example, if the U.S. Embassy in Country X was attacked the “Name of Entity” would be “United States Department of State” and the “Specific Target/Victim” would be “United States Embassy”). If names of victims are known, they are listed here preceded by the specific type of target (e.g., civilians, soldiers, officers).

Nationality of Target/Victim
(natlty1; natlty1_txt)
Categorical Variable

This is the nationality of the target that was attacked, and is not necessarily the same as the country in which the incident occurred, although in most cases it is. For hijacking incidents, the nationality of the plane is recorded and not that of the passengers. For numeric nationality codes, please see the country codes in Section III.

Second Target/Victim Type
(targtype2; targtype2_txt)
Categorical Variable

Conventions follow “Target/Victim Type” field.

Second Target/Victim Subtype
(targsubtype2; targsubtype2_txt)
Categorical Variable

Conventions follow “Target/Victim Subtype” field.

Name of Second Entity
(corp2)
Text Variable

Conventions follow “Name of Entity” field.

Second Specific Target/Victim

这是被针对的法人实体或政府机构的名称。如果未指明被针对的元素，则列出“未知”。如果没有特定实体被针对，则记录“否”。

具体目标/受害者
(目标1) 文本变量

这是被针对和/或受害的具体个人、建筑、设施等，并且是上述实体的一部分。（例如，如果美国大使馆在X国遭到袭击，“实体名称”将是“美国国务院”，“具体目标/受害者”将是“美国大使馆”）。如果知道受害者姓名，则在此列出，前面加上具体目标类型（例如，平民、士兵、官员）。

目标/受害者国籍
(国籍1; 国籍1_txt)
分类变量

这是被袭击目标的国家（地区），不一定与事件发生国相同，尽管多数情况下是一致的。对于劫持事件，记录的是飞机的国籍，而非乘客的国籍。数字国籍代码请参见第三节中的国家代码。

第二目标/受害者类型
(目标类型2; 目标类型2_txt) 分类变量

惯例遵循“目标/受害者类型”字段。

第二目标/受害者子类型
(目标子类型2; 目标子类型2_txt) 分类变量

惯例遵循“目标/受害者子类型”字段。

第二实体名称
(实体2) 文本变量

约定遵循“实体名称”字段。

第二特定目标/受害者

(*target2*)
Text Variable

Conventions follow “Specific Target/Victim” field.

Nationality of Second Target/Victim
(*natlty2; natlty2_txt*)
Categorical Variable

Conventions follow “Nationality of Target” field. For numeric nationality codes, please see the country codes in Section III.

Third Target/Victim Type
(*targtype3; targtype3_txt*)
Categorical Variable

Third Target/Victim Subtype
(*targsubtype3; targsubtype3_txt*)
Categorical Variable

Conventions follow “Target/Victim Subtype” field.

Name of Third Entity
(*corp3*)
Text Variable

Conventions follow “Name of Entity” field.

Third Specific Target/Victim
(*target3*)
Text Variable

Conventions follow “Specific Target/Victim” field.

Nationality of Third Target/Victim
(*natlty3; natlty3_txt*)
Categorical Variable

Conventions follow “Nationality of Target/Victim” field. For numeric nationality codes, please see the country codes in Section III.

(*target2*) 文本
变量

约定遵循“具体目标/受害者”字段。

第二目标/受害者国籍
(*natlty2; natlty2_*
txt) 分类变量

约定遵循“目标国籍”字段。对于数字国籍代码，请参见第三节中的国家代码。

第三目标/受害者类型
(*targtype3; targtype*
3_txt) 分类变量

第三目标/受害者子类型
(*targsubtype3;*
targsubtype3_txt) 分类变量

惯例遵循“目标/受害者子类型”字段。

第三实体名称
(*corp3*) 文本
变量

惯例遵循“实体名称”字段。

第三特定目标/受害者
(*target3*) 文
本变量

约定遵循“具体目标/受害者”字段。

第三目标/受害者国籍
(*natlty3; natlty3_*
txt) 分类变量

约定遵循“目标/受害者国籍”字段。对于数字国籍代码，请参阅第三节中的国家代码。

VII. Perpetrator Information

Information on up to three perpetrators is recorded for each incident. This includes the perpetrator group name and the perpetrator group sub-name, as well as details about any claims of responsibility for the attack. Note that the perpetrator attributions recorded for each attack reflect what is reported in open-source media accounts, which does not necessarily indicate a legal finding of culpability.

Perpetrator Group Name

(gname)
Text Variable

This field contains the name of the group that carried out the attack. In order to ensure consistency in the usage of group names for the database, the GTD database uses a standardized list of group names that have been established by project staff to serve as a reference for all subsequent entries.

In the event that the name of a formal perpetrator group or organization is not reported in source materials, this field may contain relevant information about the generic identity of the perpetrator(s) (e.g., “Protestant Extremists”). Note that these categories do not represent discrete entities. They are not exhaustive or mutually exclusive (e.g., “student radicals” and “left-wing militants” may describe the same people). They also do not characterize the behavior of an entire population or ideological movement. For many attacks, generic identifiers are the only information available about the perpetrators. Because of this they are included in the database to provide context; however, analysis of generic identifiers should be interpreted with caution.

If no information about the perpetrator group is available, this field is coded as “Unknown.”

Perpetrator Sub-Group Name

(gsubname)
Text Variable

This field contains any additional qualifiers or details about the name of the group that carried out the attack. This includes but is not limited to the name of the specific faction when available.

Second Perpetrator Group Name

(gname2)
Text Variable

This field is used to record the name of the second perpetrator when responsibility for the attack is attributed to more than one perpetrator. Conventions follow “Perpetrator Group” field.

VII. 肇事者信息

每个事件记录最多三名肇事者的信息。这包括肇事者团体名称和施暴者团体子名称，以及关于袭击的任何责任声明的详细信息。请注意，每次袭击记录的肇事者归属反映了开源媒体报道的内容，这并不一定表示法律责任认定。

实施者团体名称

(gname) 文本
变量

该字段包含实施袭击的团体名称。为确保数据库中使用团体名称的一致性，全球恐怖主义数据库使用由项目人员建立的标准化团体名称列表，作为所有后续条目参考的依据。

如果源材料中没有报告正式的肇事者团体或组织的名称，此字段可能包含关于实施者通用身份的相关信息（例如，“新教极端分子”）。请注意，这些类别并不代表离散的实体。它们不是详尽无遗的，也不是互斥的（例如，“学生激进分子”和“左翼武装分子”可能描述同一批人）。它们也不表征整个群体或意识形态运动的行为。对于许多袭击，通用标识符是唯一可获得的关于肇事者的信息。因此，它们被包含在数据库中以提供背景信息；然而，对通用标识符的分析应谨慎解读。

如果没有关于肇事者团体的信息可用，此字段编码为“未知”。

施暴者子组名

(gsubname) 文
本变量

此字段包含关于实施袭击的团体名称的任何附加限定词或详细信息。这包括但不限于具体派别的名称（如果有的话）。

第二个施暴群体名称

(gname2) 文本
变量

当袭击责任归属多于一个肇事者时，此字段用于记录第二个肇事者的名称。约定遵循“肇事者团体”字段。

Note that multiple perpetrator group attributions do not necessarily indicate that perpetrator groups collaborated to execute an attack. This could represent competing attributions, competing claims of responsibility, competing accusations, or a combination of these. Note the Perpetrator Group Unconfirmed (*guncertain*) variable below.

Second Perpetrator Sub-Group Name
(*gsubname2*)
Text Variable

This field is used to record additional qualifiers or details about the second perpetrator group name when responsibility for the attack is attributed to more than one perpetrator. Conventions follow “Perpetrator Sub-Group Name” field.

Third Perpetrator Group Name
(*gname3*)
Text Variable

This field is used to record the name of the third perpetrator when responsibility for the attack is attributed to more than two perpetrators. Conventions follow “Perpetrator Group” field.

Note that multiple perpetrator group attributions do not necessarily indicate that perpetrator groups collaborated to execute an attack. This could represent competing attributions, competing claims of responsibility, competing accusations, or a combination of these. Note the Perpetrator Group Unconfirmed (*guncertain*) variable below.

Third Perpetrator Sub-Group Name
(*gsubname3*)
Text Variable

This field is used to record additional qualifiers of details about the third perpetrator group name when responsibility for the attack is attributed to more than two perpetrators. Conventions follow “Perpetrator Sub-Group Name” field.

First Perpetrator Group Suspected/Unconfirmed?
(*guncertain1*)
Categorical Variable

This variable indicates whether or not the information reported by sources about the Perpetrator Group Name(s) is based on speculation or dubious claims of responsibility.

- 1 = "Yes"
- The perpetrator attribution(s) for the incident are suspected.
- 0 = "No"
- The perpetrator attribution(s) for the incident are not suspected.

请注意，多个施暴群体归因并不一定表明肇事者团体合作执行了一次袭击。这可能代表竞争性归因、竞争性负责声明、竞争性指控或这些的组合。请注意下面的肇事者团体未确认 (*guncertain*) 变量。

第二肇事者子组名称
(*gsubname2*)
文本变量

该字段用于记录关于第二个施暴群体名称的额外限定词或细节，当袭击责任归咎于一个以上的肇事者时使用。遵循“施暴者子组名”字段的惯例。

第三个施暴群体名称
(*gname3*) 文本
变量

当袭击责任被归因于两个以上的施暴者时，此字段用于记录第三个施暴者的名称。惯例遵循“肇事者团体”字段。

请注意，多个施暴群体归因并不一定表示肇事者团体合作执行袭击。这可能代表竞争性归因、竞争性负责声明、竞争性指控或其组合。请注意下面的“肇事者团体未确认” (*guncertain*) 变量。

第三肇事者子组名称
(*gsubname3*)
文本变量

当袭击责任被归因于两个以上的施暴者时，此字段用于记录关于第三个施暴群体名称的额外限定细节。惯例遵循“施暴者子组名”字段。

首个肇事组织是否被疑似/未确认?
(*guncertain1*) 分类变
量

此变量表示来源报告的关于肇事组织名称的信息是否基于推测或可疑的负责声明。

- 1 = "是" 该事件的肇事者归属被怀疑。
- 0 = "否" 该事件的肇事者归属未被怀疑。

Second Perpetrator Group Suspected/Unconfirmed?

(guncertain2)
Categorical Variable

This variable indicates whether or not the information reported by sources about the Perpetrator Group Name(s) is based on speculation or dubious claims of responsibility.

- 1 = "Yes"
- The perpetrator attribution(s) for the incident are suspected.
- 0 = "No"
- The perpetrator attribution(s) for the incident are not suspected.

Conventions follow “First Perpetrator Group Suspected/Unconfirmed?”

Third Perpetrator Group Suspected/Unconfirmed?

(guncertain3)
Categorical Variable

This variable indicates whether or not the information reported by sources about the Perpetrator Group Name(s) is based on speculation or dubious claims of responsibility.

- 1 = "Yes"
- The perpetrator attribution(s) for the incident are suspected.
- 0 = "No"
- The perpetrator attribution(s) for the incident are not suspected.

Conventions follow “First Perpetrator Group Suspected/Unconfirmed?”

Unaffiliated Individual(s)

(individual)
Categorical Variable

This variable indicates whether or not the attack was carried out by an individual or several individuals not known to be affiliated with a group or organization. This information should be interpreted with caution, because it is likely that assailants who might be characterized as “unaffiliated individuals” are frequently unidentified.

- 1 = "Yes"
- The perpetrator(s) were identified by name (or specific unnamed minors) and not known to be affiliated with a group or organization.
- 0 = "No"
- The perpetrator(s) were not identified as unaffiliated individuals (i.e. the perpetrators were either not identified by name, or were known to be affiliated with a group or organization).

Note: This field is presently only systematically available with incidents occurring after 1997.

Number of Perpetrators

(nperps)
Numeric Variable

第二实施者团体疑似/未确认？

(guncertain2) 分类变量

该变量指示来源报告的肇事组织名称信息是否基于推测或可疑的负责声明。

- 1 = "是" 该事件的肇事者归属被怀疑。
- 0 = "否" 该事件的肇事者归属未被怀疑。

约定遵循 “首个肇事组织是否被疑似/未确认？”

第三个施暴者团体疑似/未确认？

(guncertain3) 分类变量

此变量指示来源关于肇事组织名称报告的信息是否基于推测或可疑的负责声明。

- 1 = "是" 该事件的肇事者归属被怀疑。
- 0 = "否" 该事件的肇事者归属未被怀疑。

惯例遵循 “首个肇事组织是否被疑似/未确认？”

无关联个人

(individual) 分类变量

此变量指示袭击是否由一名或多名未知隶属于任何团体或组织的个人实施。解释此信息时应谨慎，因为可能被描述为 “无关联个体” 的袭击者往往身份不明。

- 1 = "是" 实施者被指名（或特定的未具名未成年人）且未知隶属于任何团体或组织。
- 0 = "否" 实施者未被识别为无关联个体（即实施者要么未具名，要么已知隶属于团体或组织）。

注：此字段目前仅对1997年之后发生的事件系统性可用。

实施者人数

(nperps) 数值变量

This field indicates the total number of terrorists participating in the incident. (In the instance of multiple perpetrator groups participating in one case, the total number of perpetrators, across groups, is recorded). There are often discrepancies in information on this value.

Where several independent credible sources report different numbers of attackers, the value of this variable reflects the number given by the majority of sources, unless there is reason to do otherwise. Where there is no majority figure among independent sources, the database records the lowest proffered perpetrator figure, unless there is clear reason to do otherwise. In cases where the number of perpetrators is stated vaguely, for example “...at least 11 attackers”, then the lowest possible number is recorded, in this example, “11.” “-99” or “Unknown” appears when the number of perpetrators is not reported.

Number of Perpetrators Captured
(*nperpcap*)
Numeric Variable

This field records the number of perpetrators taken into custody. “-99” or “Unknown” appears when there is evidence of captured, but the number is not reported.

Divergent reports on the number of perpetrators captured are dealt with in same manner used for the Number of Perpetrators variable described above.

Note: This field is presently only systematically available with incidents occurring after 1997.

Claim of Responsibility?
(*claimed*)
Categorical Variable

This field is used to indicate whether a group or person(s) claimed responsibility for the attack. If marked “Yes”, it indicates that a person or a group did in fact claim responsibility. When there are multiple perpetrator groups involved, this field refers to the First Perpetrator Group (separate fields for the Second and Third groups follow below).

- 1 = "Yes" A group or person claimed responsibility for the attack.
- 0 = "No" No claim of responsibility was made.

Note: This field is presently only systematically available with incidents occurring after 1997.

Mode for Claim of Responsibility
(*claimmode; claimmode_txt*)
Categorical Variable

该字段表示参与事件的恐怖分子总人数。（若有多个肇事者团体参与同一案件，则记录所有团体的肇事者总人数）。关于此数值的信息常有出入。

当多个独立可靠来源报告不同数量的攻击者时，该变量的值反映多数来源给出的数字，除非有理由不这样做。当独立来源中没有多数数字时，数据库记录最低的肇事者数字，除非有明确理由不这样做。在肇事者人数表述模糊的情况下，例如 “……至少11名攻击者”，则记录最低可能数字，在此例中为 “11”。如果未报告肇事者人数，则显示 “-99” 或 “未知”。

被捕犯罪人数
(*nperpcap*) 数值变量

此字段记录被拘留的肇事者人数。当有证据表明有人被捕但未报告具体人数时，显示 “-99” 或 “未知”。

对于被捕犯罪人数的不同报告，处理方式与上述实施者人数变量相同。

注：此字段目前仅适用于1997年之后发生的事件。

责任声明？
(*claimed*) 分类变量

此字段用于指示是否有团体或个人声称对袭击负责。如果标记为 “是”，则表示确实有个人或团体声称负责。当涉及多个肇事者团体时，此字段指第一实施者团体（第二和第三团体的单独字段如下）。

- 1 = "是" 一个团体或个人声称对袭击负责。0 = "否" 未作责任声明。

注：此字段 目前仅系统性地适用于1997年之后发生的事件

责任声明模式
(*claimmode; claimmode_txt*) 分类变量

This records one of 10 modes used by claimants to claim responsibility and might be useful to verify authenticity, track trends in behavior, etc. If greater detail exists (for instance, a particularly novel or strange mode is used) this information is captured in the “Additional Notes” field.

- Mode Values:
- | | |
|--------------------------|---|
| 1 = Letter | 6 = Video |
| 2 = Call (post-incident) | 7 = Posted to website, blog, social media |
| 3 = Call (pre-incident) | 8 = Personal claim |
| 4 = E-mail | 9 = Other |
| 5 = Note left at scene | 10 = Unknown |

Note: This field is presently only systematically available with incidents occurring after 1997.

Competing Claims of Responsibility?
(*compclaim*)
Categorical Variable

This field is used to indicate whether more than one group claimed separate responsibility for the attack. If marked “Yes”, it indicates that the groups entered in conjunction with the case each claimed responsibility for the attack (i.e., they did not work together, but each independently tried to claim credit for the attack).

- | | |
|--------------|--|
| 1 = "Yes" | There are competing claims of responsibility for the attack. |
| 0 = "No" | There are not competing claims of responsibility for the attack. |
| -9= “Unknown | No indication of competing claims. |
| [NULL] | Not applicable (e.g., Perpetrator is unknown; only one perpetrator reported; or no claim of responsibility reported) |

Note: This field is presently only systematically available with incidents occurring after 1997.

Second Group Claim of Responsibility?
(*claim2*)
Categorical Variable

- | | |
|-----------|--|
| 1 = "Yes" | A group or person claimed responsibility for the attack. |
| 0 = "No" | No claim of responsibility was made. |

Conventions follow the “Claim of Responsibility” field.

Note: This field is presently only systematically available for incidents occurring after 1997.

Mode for Second Group Claim of Responsibility
(*claimmode2*)

此项记录声称者用于声明责任的10种模式之一，有助于验证真实性、追踪行为趋势等。若存在更多细节（例如使用了特别新颖或奇怪的方式），该信息将被记录在“附加说明”字段中。

- 模式值：1 = 信件2 = 电话（事件后）3 = 电话（事件前）4 = 电子邮件5 = 现场留
- 6 = 视频7 = 发布到网站、博客、社交媒体8 = 个人声称9 = 其他10 = 未知

注意：目前此字段仅对1997年之后发生的事件系统可用。

竞争性负责声明?
(*compclaim*) 分类变量

此字段用于指示是否有多于一个团体声称对袭击分别负责。如果标记为“是”，表示与案例相关的每个团体都声称对袭击负责（即它们没有合作，而是各自独立试图认领袭击）。

- 1 = "是" 存在对此次袭击的竞争性责任声明。0 = "否" 不存在对此次袭击的竞争性责任声明。9= "未知" 没有竞争性责任声明的迹象。[NULL] 不适用（例如，肇事者未知；仅报告一个肇事者；或没有报告责任声明）

注意：此字段目前仅对1997年之后发生的事件系统可用。

第二组责任声明?
(*claim2*)
分类变量

- 1 = "是" 团体或个人claimed对袭击负责。0 = "否" 未提出责任声明。

惯例遵循“责任声明”字段。

注意：此fi 该字段目前仅系统性地适用于199年后发生的事件7.

第二组责任声明模式
(*claimmode2*)

Categorical Variable

Conventions follow the “Mode for Claim of Responsibility” field.

Note: This field is presently only systematically available for incidents occurring after 1997.

Third Group Claim of Responsibility?

(claim3)

Categorical Variable

- 1 = "Yes"
- A group or person claimed responsibility for the attack.
- 0 = "No"
- No claim of responsibility was made.

Conventions follow the “Claim of Responsibility” field.

Note: This field is presently only systematically available with incidents occurring after 1997.

Mode for Third Group Claim of Responsibility

(claimmode3)

Categorical Variable

Conventions follow “Mode for Claim of Responsibility” field.

Note: This field is presently only systematically available with incidents occurring after 1997.

Motive

(motive)

Text Variable

When reports explicitly mention a specific motive for the attack, this motive is recorded in the “Motive” field. This field may also include general information about the political, social, or economic climate at the time of the attack if considered relevant to the motivation underlying the incident.

Note: This field is presently only systematically available with incidents occurring after 1997.

VIII. Casualties and Consequences

Total Number of Fatalities

(nkill)

Numeric Variable

分类变量

约定遵循 “责任声明模式” 字段。

注：此字段目前仅系统性地适用于1997年之后发生的事件。

第三团体责任声明？

(claim3) 分类变量

1 = "是" 某个团体或个人声称对袭击负责。0 = "否" 未提出责任声明。

约定遵循 “责任声明” 字段。

注意：该字段 目前仅系统地适用于1997年之后发生的事件

第三团体责任声明模式

(claimmode3) 分类变量

约定遵循 “责任声明模式” 字段。

注意：此字段 目前仅对1997年之后发生的事件系统性地可用

动机

(动机) 文本变量

当报告明确提及袭击的具体动机时，该动机记录在“动机”字段中。此字段还可能包含袭击发生时政治、社会或经济环境的一般信息，如果被认为与事件背后的动机相关。

注意：此字段目前仅对1997年之后发生的事件系统性地可用。

八、伤亡与后果

总死亡人数

(nkill) 数值变量

This field stores the number of total confirmed fatalities for the incident. The number includes all victims *and* attackers who died as a direct result of the incident.

Where there is evidence of fatalities, but a figure is not reported or it is too vague to be of use, this field remains blank. If information is missing regarding the number of victims killed in an attack, but perpetrator fatalities are known, this value will reflect only the number of perpetrators who died as a result of the incident. Likewise, if information on the number of perpetrators killed in an attack is missing, but victim fatalities are known, this field will only report the number of victims killed in the incident.

Where several independent sources report different numbers of casualties, the database will usually reflect the number given by the most recent source. However, the most recent source will not be used if the source itself is of questionable validity or if the source bases its casualty numbers on claims made by a perpetrator group. When there are several “most recent” sources published around the same time, or there are concerns about the validity of a recent source, the majority figure will be used. Where there is no majority figure among independent sources, the database will record the lowest proffered fatality figure, unless that figure comes from a source of questionable validity or there is another compelling reason to do otherwise. Conflicting reports of fatalities will be noted in the “Additional Notes” field.

Note: Preservation of Statistical Accuracy

When several cases are linked together, sources sometimes provide a cumulative fatality total for all of the events rather than fatality figures for each incident. In such cases, the preservation of statistical accuracy is achieved by distributing fatalities across the linked incidents. It will be noted in the “Additional Notes” field whenever cumulative totals are divided across multiple events. This method for preserving statistical accuracy is also used for calculating the values for the following fields when individual event totals are unknown: “Number of U.S. Fatalities,” “Number of Perpetrator Fatalities,” “Total Number of Injured,” “Number of U.S. Injured,” and “Number of Perpetrators Injured.”

Number of US Fatalities

(nkillus)

Numeric Variable

This field records the number of U.S. citizens who died as a result of the incident, and follows the conventions of “Total Number of Fatalities” described above. Thus, this field records the number of U.S. victims *and* U.S. perpetrators who died as a result of the attack. The value for this field is not limited to U.S. citizens killed on U.S. soil, but also includes U.S. citizens who died in incidents occurring outside of the U.S.

Number of Perpetrator Fatalities

(nkillter)

Numeric Variable

此字段存储事件中确认死亡的总人数。该数字包括所有受害者和因事件直接死亡的攻击者。

如果存在死亡证据，但没有报告具体数字或过于模糊无法使用，此字段将留空。如果关于袭击中受害者死亡人数的信息缺失，但已知肇事者死亡人数，此值将仅反映事件中死亡的肇事者人数。同样，如果关于袭击中肇事者死亡人数的信息缺失，但已知受害者死亡人数，此字段将仅报告事件中受害者的死亡人数。

如果多个独立来源报告的伤亡人数不同，数据库通常反映最新来源提供的数字。然而，如果最新来源本身具有可疑有效性，或其伤亡数字基于肇事者团体的声称，则不会使用该最新来源。当有多个“最新”来源在相近时间发布，或对近期来源的有效性存在疑虑时，将采用多数数字。如果独立来源中没有多数数字，数据库将记录最低提供死亡数字，除非该数字来自具有可疑有效性的来源或有其他令人信服的理由不这样做。关于死亡人数的冲突报告将在“附加说明”字段中注明。

注意：统计准确性的保持

当多个事件被关联在一起时，来源有时会提供所有事件的累计死亡总数，而不是每个事件的死亡人数。在这种情况下，通过将死亡人数分配到各关联事件中来保持统计准确性。每当累计总数被分配到多个事件时，都会在“附加说明”字段中注明。这种保持统计准确性的方法也用于在单个事件总数未知时计算以下字段的值：“美国死亡人数”、“肇事者死亡人数”、“受伤总人数”、“美国受伤人数”和“肇事者受伤人数”。

美国死亡人数

(nkillus) 数值变量

此字段记录因事件而死亡的美国公民人数，并遵循上述“总死亡人数”的约定。因此，此字段记录因袭击而死亡的美国受害者和美国肇事者的人数。此字段的值不限于在美国领土上被杀的美国公民，还包括在境外事件中死亡的美国公民。

肇事者死亡人数(nkillter) 数值

变量

Limited to only perpetrator fatalities, this field follows the conventions of the “Total Number of Fatalities” field described above.

Total Number of Injured

(nwound)

Numeric Variable

This field records the number of confirmed non-fatal injuries to both perpetrators and victims. It follows the conventions of the “Total Number of Fatalities” field described above.

Number of US Injured

(nwoundus)

Numeric Variable

This field records the number of confirmed non-fatal injuries to U.S. citizens, both perpetrators and victims. It follows the conventions of the “Number of U.S. Fatalities” field described above.

Number of Perpetrators Injured

(nwoundte)

Numeric Variable

Conventions follow the “Number of Perpetrator Fatalities” field described above.

Property Damage

(property)

Categorical Variable

“Yes” appears if there is evidence of property damage from the incident.

- 1 = "Yes"
- The incident resulted in property damage.
- 0 = "No"
- The incident did not result in property damage.
- 9 = "Unknown"
- It is unknown if the incident resulted in property damage.

Extent of Property Damage

(propextent; propextent_txt)

Categorical Variable

If “Property Damage?” is “Yes,” then one of the following four categories describes the extent of the property damage:

- 1 = Catastrophic (likely ≥ \$1 billion)
- 2 = Major (likely ≥ \$1 million but < \$1 billion)
- 3 = Minor (likely < \$1 million)
- 4 = Unknown

仅限肇事者死亡人数，该字段遵循上述“总死亡人数”字段的惯例。

受伤总人数

(受伤人数) 数值变量

此字段记录已确认的肇事者和受害者双方的 非致命伤害 人数。它遵循上述“总死亡人数”字段的惯例。

美国受伤人数

(美国公民受伤人数)

数值变量

该字段记录美国公民（包括肇事者和受害者）经确认的非致命受伤人数。它遵循上述“美国死亡人数”字段的惯例。

肇事者受伤人数

(nwoundte) 数值变

量

惯例遵循上述“肇事者死亡人数”字段。

财产损失

(property) 分类变量

如果事件中存在财产损失的证据，则显示“是”。

1 = "是" 事件导致了财产损失。0 = "否" 事件未导致财产损失。-9 = "未知" 不清楚事件是否导致了财产损失。

财产损失程度(propextent;

propextent_txt) 分类变量

如果“财产损失？”是“是”，则以下四个类别之一描述了财产损失的程度：

- 1 = 灾难性（可能≥ 10亿美元）2 = 重大
- （可能≥ 100万美元但< 10亿美元）3 = 轻
- 微（可能< 100万美元）4 = 未知

Value of Property Damage (in USD)
(propvalue)
Numeric Variable

If “Property Damage?” is “Yes,” then the exact U.S. dollar amount (at the time of the incident) of total damages is listed. Where applicable, property values reported in foreign currencies are converted to U.S. dollars before being entered into the GTD. If no dollar figure is reported, the field is left blank. That is, a blank field here does *not* indicate that there was no property damage but, rather, that no precise estimate of the value was available. The value of damages only includes direct economic effects of the incident (i.e. cost of buildings, etc.) and not indirect economic costs (longer term effects on the company, industry, tourism, etc.).

Protocols for recording inconsistent numbers, etc., listed above are followed (see, for example, “Number of Perpetrators”).

Property Damage Comments
(propcomment)
Text Variable

If “Property Damage?” is “Yes,” then non-monetary or imprecise measures of damage may be described in this field. This field is also used to list specific details about the property that was damaged in an attack, such as the type of vehicle that was destroyed, the areas or parts of a building that were damaged, or the types of assets that were stolen.

Hostages or Kidnapping Victims
(ishostkid)
Categorical Variable

This field records whether or not the victims were taken hostage (i.e. held against their will) or kidnapped (i.e. held against their will and taken to another location) during an incident.

- 1 = "Yes"
- 0 = "No"
- 9 = "Unknown"
- The victims were taken hostage or kidnapped.
- The victims were not taken hostage or kidnapped.
- It is unknown if the victims were taken hostage or kidnapped.

Total Number of Hostages / Kidnapping Victims
(nhostkid)
Numeric Variable

This field records the total number of hostages or kidnapping victims. For successful hijackings, this value will reflect the total number of crew members and passengers aboard the vehicle at the time of the incident.

财产损失价值（美元）
(propvalue)
数值变量

如果“财产损失？”为“是”，则列出事件发生时总损失的精确美元金额。在适用情况下，以外币报告的财产价值在录入全球恐怖主义数据库前会转换为美元。如果没有报告美元数字，该字段留空。也就是说，此处的空白字段并不表示没有财产损失，而是表示没有可用的精确价值估算。损失价值仅包括事件的直接经济影响（例如建筑物成本等），不包括间接经济成本（对公司、行业、旅游等的长期影响）。

上述列出的一致数字等记录协议按照要求执行（参见例如“实施者人数”）。

财产损失评论
(propcomment) 文本变量

如果“财产损失？”为“是”，则此字段可描述非货币或不精确的损失度量。该字段还用于列出袭击中受损财产的具体细节，例如被毁交通工具的类型、受损建筑的区域或部位，或被盗资产类型。

人质或绑架受害者
(ishostkid) 分类变量

此字段记录事件中受害者是否被作为人质（即被强制扣留）或绑架（即被强制扣留并带至另一地点）。

- 1 = "是" 受害者被作为人质或绑架。
- 0 = "否" 受害者未被作为人质或绑架。
- 9 = "未知" 受害者是否被作为人质或绑架未知。

人质/绑架受害者总数
(nhostkid) 数值变量

此字段记录人质或绑架受害者的总数。对于成功的劫持事件，该值将反映事件发生时交通工具上机组人员和乘客的总数。

As with other fields, where several independent sources report different numbers of hostages, the GTD reflects the number given by the most recent source, unless there is reason to do otherwise. When there are several most recent sources available, or there are question about the validity of a recent source, the GTD will report the majority figure from a group of independent sources. Where there is no majority figure among independent sources, the database will record the lowest proffered hostage figure, unless there is clear reason to do otherwise.

In cases where the number of hostages or kidnapping victims is stated vaguely, for example, “...at least 11 hostages”, then the lowest possible number will be recorded, in this example “11.” If the number of hostages is unknown or unidentified, this field records “-99” (unknown).

Number of US Hostages / Kidnapping Victims
(*nhostkidus*)
Numeric Variable

This field reports the number of U.S. citizens that were taken hostage or kidnapped in the incident. Conventions follow the “Total Number of Hostages/ Kidnapping Victims” field described above.

Hours of Kidnapping / Hostage Incident
(*nhours*)
Numeric Variable

If the “Attack Type” is “Hostage Taking (Kidnapping),” “Hostage Taking (Barricade Incident),” or a successful “Hijacking,” then the duration of the incident is recorded *either* in this field *or* in the next field depending on whether the incident lasted a matter of hours or days. If neither hours nor days are known, both fields are coded as “-99” (unknown).

If the incident lasted for less than 24 hours, this field records the approximate number of hours.

If the incident lasted for more than 24 hours (i.e., at least one day), then the approximate number of days is recorded in the next field.

Days of Kidnapping / Hostage Incident
(*ndays*)
Numeric Variable

If the “Attack Type” is “Hostage Taking (Kidnapping),” “Hostage Taking (Barricade Incident),” or (successful) “Hijacking” and if the duration of the kidnapping / hostage incident last for more than 24 hours, this field records the duration of the incident in days. If information on hours and days is provided, the figure is rounded to the nearest day.

Country That Kidnappers/Hijackers Diverted To

与其他字段类似，当多个独立来源报告不同数量的人质时，全球恐怖主义数据库会反映最新来源提供的数字，除非有理由不这样做。当有多个最新来源可用，或对最新来源的有效性存疑时，全球恐怖主义数据库将报告一组独立来源中的多数数字。如果独立来源中没有多数数字，数据库将记录最低的人质数字，除非有明确的理由不这样做。

当人质或绑架受害者数量表述模糊时，例如 “……至少11名人质”，则记录最低的可能数字，本例中为 “11”。如果人质数量未知或无法识别，此字段记录 “-99” （未知）。

美国被劫持/绑架人数(*nhostkidus*) 数值变
量

该字段报告事件中被劫持或绑架的美国公民人数。约定遵循上述 “人质/绑架受害者总数” 字段的描述。

绑架/劫持事件时长
(*nhours*) 数值变量

如果 “攻击类型” 是 “劫持人质（绑架）”、“劫持人质（路障事件）” 或成功的 “劫持”，则事件持续时间记录在此字段或下一个字段，取决于事件持续了数小时还是数天。如果小时和天数均未知，则两个字段均编码为 “-99” （未知）。

如果事件持续时间少于24小时，此字段记录近似小时数。

如果事件持续时间超过24小时（即至少一天），则近似天数记录在下一个字段。

绑架/劫持事件天数(*ndays*) 数值变
量

如果 “攻击类型” 为 “劫持人质（绑架）”、“劫持人质（路障事件）” 或（成功的）“劫持”，且绑架/劫持事件持续时间超过24小时，则该字段以天为单位记录事件持续时间。如果提供了小时和天的信息，则数值四舍五入到最接近的天数。

绑架者/劫机者转移到的国家

(divert)
Text Variable

If the “Attack Type” is “Hostage Taking (Kidnapping)” or “Hijacking” then this field will list the country that hijackers diverted a vehicle to, or the country that the kidnap victims were moved to and held. If hijackers did not divert a vehicle to another country, this field is blank. If a vehicle was diverted to multiple countries, this field will record the first country that the vehicle was diverted to, and the others will be listed in the “Additional Notes” field.

Country of Kidnapping/Hijacking Resolution
(kidhijcountry)
Text Variable

If the “Attack Type” is “Hostage Taking (Kidnapping)” or “Hijacking” then this field lists the country in which the incident was resolved or ended. If the incident was not resolved in another country, this field is blank. If a vehicle was diverted to more than one country, this field will record the last country that it was diverted to, and the others will be listed in the “Additional Notes” field.

Ransom Demanded
(ransom)
Categorical Variable

- 1 = "Yes"

The incident involved a demand of monetary ransom.
- 0 = "No"

The incident did not involve a demand of monetary ransom.
- 9 = "Unknown"

It is unknown if the incident involved a demand of monetary ransom.
- [NULL]

Not applicable

Total Ransom Amount Demanded
(ransomamt)
Numeric Variable

If a ransom was demanded, then the amount (in U.S. dollars) is listed in this field. If a ransom was demanded but the monetary figure is unknown, then this field will report “-99” (unknown). If there are conflicting reports on the amount of ransom demanded, the majority figure from independent sources will be used. If no majority exists, the lowest proffered figure will be used, unless that figure comes from a source of questionable validity or there is another compelling reason to do otherwise.

Ransom Amount Demanded from US Sources
(ransomamtus)
Numeric Variable

(改航)
文本变量

如果“攻击类型”是“劫持人质（绑架）”或“劫持”，则此字段将列出劫机者将交通工具改航至的国家，或者绑架受害者被转移和关押的国家。如果劫机者未将交通工具改航至其他国家，则此字段为空。如果交通工具被改航至多个国家，则此字段将记录第一个被改航至的国家，其他国家将在“附加说明”字段中列出。

国家/绑架/劫持决议
(kidhijcountry)
文本变量

如果“攻击类型”是“劫持人质（绑架）”或“劫持”，则此字段列出事件解决或结束的国家。如果事件未在另一个国家解决，则此字段为空。如果交通工具被转移至多个国家，此字段将记录最后转移到的国家，其他转移国家将列在“附加说明”字段中。

索要赎金
(赎金) 分类变量

- 1 = "是"

事件涉及金钱赎金要求。
- 0 = "否"

事件不涉及金钱赎金要求。
- 9 = "未知"

事件是否涉及金钱赎金要求未知。[NULL]
- 不适用

要求赎金总额 (ransomamt) 数
值变量

如果要求赎金，则此字段列出金额（以美元计）。如果要求赎金但金额未知，则此字段报告为“-99”（未知）。如果关于要求赎金金额存在冲突报告，将使用独立来源中的多数数字。如果不存在多数数字，则将使用最低的提供数字，除非该数字来自可疑有效性的来源或有其他令人信服的理由不这样做。

美国来源要求赎金金额(ransomamtus) 数
值变量

If a ransom was demanded from U.S. sources, then the amount (in U.S. dollars) is listed in this field. If a ransom was demanded from U.S. sources but the monetary figure is unknown, then this field will report “-99” (unknown). If there are conflicting reports on the amount of ransom demanded from a U.S. source, the majority figure from independent sources will be used. If no majority exists, the lowest proffered figure will be used, unless there is a reason to do otherwise.

Total Ransom Amount Paid
(ransompaid)
Numeric Variable

If a ransom amount was paid, then the amount (in U.S. dollars) is listed in this field. If a ransom was paid but the monetary figure was unspecified, then this field will report “-99” (unknown). A value of “-99” will also be reported for any case where it is suspected that a ransom was paid, but it has not been confirmed. If there are conflicting reports on the amount of ransom paid, the majority figure from independent sources will be used. If no majority exists, the lowest proffered figure will be used, unless that figure comes from a source of questionable validity or there is another compelling reason to do otherwise.

Ransom Amount Paid by US Sources
(ransompaidus)
Numeric Variable

If a ransom amount was paid by U.S. sources, then this figure is listed in U.S. dollars. If a ransom was paid by U.S. sources but the monetary figure was unspecified, then this field will report “-99” (unknown). If there are conflicting reports on the amount of ransom paid by a U.S. source, the majority figure from independent sources will be used. If no majority exists, the lowest proffered figure will be used, unless that figure comes from a source of questionable validity or there is another compelling reason to do otherwise.

Ransom Notes
(ransomnote)
Text Variable

This field is used to record any specific details relating to a ransom that are not captured in the other fields. This includes any information about non-money demands made by perpetrators, as well as information on conflicting reports of how much money was demanded and/or paid.

Note: This field is presently only systematically available with incidents occurring after 1997.

Kidnapping/Hostage Outcome
(hostkidoutcome; hostkidoutcome_txt)
Categorical Variable

如果美国来源被索要赎金，则此字段列出金额（以美元计）。如果美国来源被索要赎金但货币金额未知，则此字段报告“-99”（未知）。如果关于美国来源被索要赎金金额的报告存在冲突，则使用来自独立来源的多数数字。如果不存在多数数字，则使用提供的最低数字，除非有理由不这样做。

已付赎金总额
(ransompaid) 数值变量

如果支付了赎金，则此字段列明金额（以美元计）。如果支付了赎金但金额未具体说明，则此字段将报告“-99”（未知）。对于怀疑支付了赎金但尚未确认的案件，也将报告“-99”值。如果关于已付赎金金额的报告存在冲突，将采用独立来源的多数数字。如果没有多数数字，则采用最低提出的数字，除非该数字来自可疑有效性的来源，或者其他令人信服的理由不这样做。

美国来源支付的赎金金额
(ransompaidus) 数值变量

如果美国来源支付了赎金金额，则该数字以美元列出。如果美国来源支付了赎金但货币数额未指定，则此字段将报告“-99”（未知）。如果关于美国来源支付的赎金金额存在相互矛盾的报道，则将使用来自独立来源的多数数字。如果不存在多数，则将使用最低的提议数字，除非该数字来自可疑有效性的来源，或者其他令人信服的理由不这样做。

赎金备注
(赎金记录) 文本
变量

此字段用于记录其他字段未捕获的与赎金相关的任何具体细节。这包括有关肇事者提出的非金钱要求的信息，以及关于要求支付和/或已支付金额的冲突报道的信息。

注意：此字段目前仅对1997年之后发生的事件进行系统性收录。

绑架/人质结果
(hostkidoutcome; hostkidoutcome_txt)
分类变量

This field captures the eventual fate of hostages and kidnap victims. If the “Attack Type” is “Hostage Taking (Kidnapping),” “Hostage Taking (Barricade Incident),” or a successful “Hijacking,” then this field applies. The seven values for this field are:

- 1 = Attempted Rescue
- 2 = Hostage(s) released by perpetrators
- 3 = Hostage(s) escaped (not during rescue attempt)
- 4 = Hostage(s) killed (not during rescue attempt)
- 5 = Successful Rescue
- 6 = Combination
- 7 = Unknown

Number Released/Escaped/Rescued
(nreleased)
Numeric Variable

If the “Attack Type” is “Hostage Taking (Kidnapping),” “Hostage Taking (Barricade Incident),” or a successful “Hijacking,” then this field will apply. This field records the number of hostages who survived the incident.

As with the total number of kidnapping victims, where several independent sources report different numbers of hostages, the database will reflect the number given by the most recent source, unless there is reason to do otherwise. If there are several most recent sources available, the majority number form a group of independent sources will be used, unless there is reason to do otherwise. Where there is no majority figure among independent sources, the database will record the lowest proffered hostage released/escaped/rescued figure, unless there is clear reason to do otherwise.

In cases where the number of hostages released/escaped/rescued is stated vaguely, for example “...at least 11 hostages were released”, then the lowest possible number will be recorded, in this example “11.” If the fate of the hostages is unknown, this field will record “- 99.”

IX. Additional Information and Sources

Additional Notes
(addnotes)
Text Variable

This field is used to capture additional relevant details about the attack. It may include any of the following information:

此字段记录人质和绑架受害者的最终命运。如果“攻击类型”为“劫持人质（绑架）”、“劫持人质（路障事件）”或成功的“劫持”，则适用此字段。该字段的七个值如下：

- 1 = 尝试营救
- 2 = 人质被 perpetrators 释放
- 3 = 人质逃脱（非营救尝试期间）
- 4 = 人质被杀（非营救尝试期间）
- 5 = 成功营救
- 6 = 组合
- 7 = 未知

释放/逃脱/获救人数(nreleased)
数值变量

如果“攻击类型”是“劫持人质（绑架）”、“劫持人质（路障事件）”或成功的“劫持”，则此字段适用。该字段记录了事件中幸存的人质数量。

与绑架受害者总数类似，当多个独立来源报告不同的人质数目时，数据库将反映最新来源给出的数字，除非有理由不这么做。如果存在多个最新来源，则将使用一组独立来源中的多数数字，除非有理由不这么做。当独立来源中没有多数数字时，数据库将记录最低的人质释放/逃脱/获救数字，除非有明确的理由不这么做。

在释放/逃脱/获救人质数量表述模糊的情况下，例如“……至少有11名人质被释放”，则将记录最低可能数字，此处为“11”。如果人质命运未知，则此字段记录“- 99”。

九、附加信息与来源

附加说明
(addnotes) 文
本变量

此字段用于捕获有关袭击的其他相关细节。可能包含以下任何信息：

- Additional information that could not be captured in any of the above fields, such as details about hostage conditions or additional countries hijacked vehicles were diverted to.
- Supplemental important information not specific to the particular attack, such as multiple attacks in the same area or by the same perpetrator.
- Uncertainties about the data (such as differing reports of casualty numbers, aggregated casualty numbers split across multiple incidents, or uncertainty about perpetrators responsible).
- Unusual factors, such as a shift in tactics, the reappearance of an organization, the emergence of a new organization, an attack carried out on a historical date, or an escalation of a violent campaign.
- The fate (legal, health, or otherwise) of either victims or perpetrators where this is mentioned in GTD source documents.
- In addition, the instructions for several fields listed above have specific indications for placing additional information in the “Additional Notes” field, as needed:
 - *Specific Target/Victim*
If the Target/Victim is multiple victims (e.g., in a kidnapping or assassination), up to three names are recorded in the “Specific Target/Victim” field, with remaining names recorded in the “Additional Notes” field.
 - *Perpetrator Individual(s)’ Name(s)*
Names of individuals identified as planners, bomb-makers, etc., who are indirectly involved in an attack, may recorded in the “Additional Notes” field.
 - *Mode for Claim of Responsibility*
If greater detail is needed than provided for the “Mode for Claim of Responsibility” field (for instance, a particularly novel or strange mode is used) this information may be captured in the “Additional Notes” field.
 - *Kidnapping/Hostage Outcome*
If greater detail is available than the Kidnapping/Hostage Outcome field allows, then further details about the fate of hostages/kidnapped may be recorded in the “Additional Notes” field.
- Notes if an attack has been marked as “doubt terrorism proper” and provides explanation of reasons (excluding cases where Alternative Designation = Insurgency).

Note: This field is presently only systematically available with incidents occurring after 1997.

International- Logistical
(INT_LOG)
Categorical Variable

- 以上任何字段中未能捕捉的附加信息，例如关于人质状况的详细信息，或被劫持车辆被转移到的其他国家。
- 不属于特定攻击的补充重要信息，例如同一地区或同一肇事者发动的多次攻击。
- 关于数据的不确定性（例如伤亡人数报告不一致、跨多个事件的伤亡总数拆分，或对负责的肇事者不确定）。
- 不寻常因素，例如战术转变、组织重现、新组织出现、在历史日期发动的袭击，或暴力活动的升级。
- 受害者或肇事者的命运（法律、健康或其他），在GTD源文件中提及的情况。
- 此外，上述几个字段的说明中，有特定指示将附加信息根据需要放入“附加说明”字段：
 - 具体目标/受害者如果目标/受害者是多人（例如，在绑架或暗杀中），最多三个姓名记录在“具体目标/受害者”字段中，其余姓名记录在“附加说明”字段中。
 - 肇事者个人姓名被识别为策划者、炸弹制造者等间接参与袭击的个人姓名，可以记录在“附加说明”字段中。
 - 责任声明模式如果需要比“责任声明模式”字段提供的更详细信息（例如，使用了特别新颖或奇怪的方式），这些信息可以记录在“附加说明”字段中。
 - 绑架/人质结果如果“绑架/人质结果”字段允许的详细程度不足，则关于人质/被绑架者命运的更多细节可以记录在“附加说明”字段中。
- 如果某次袭击被标记为“怀疑是否为纯粹恐怖主义”，则提供原因说明（排除替代标识= 叛乱的情况）。

注意：此字段 目前仅对1997年之后发生的事件系统地可用

国际-后勤(INT_LL
OG) 分类变量

This variable is based on a comparison between the nationality of the perpetrator group and the location of the attack. It indicates whether a perpetrator group crossed a border to carry out an attack. Typically the border is a national border, however in cases where perpetrator groups represent non-contiguous contested territory (e.g., Puerto Rico, Corsica, Northern Ireland) or a secure border (e.g., West Bank and Gaza Strip) the nationality of the perpetrator group is coded as the contested territory and attacks against the parent country are coded as logistically international.

- 1 = "Yes"

The attack was logistically international; the nationality of the perpetrator group differs from the location of the attack. If the perpetrator group is multinational, the attack is logistically international if *all* of the group’s nationalities differ from the location of the attack.
- 0 = "No"

The attack was logistically domestic; the nationality of the perpetrator group is the same as the location of the attack. If the perpetrator group is multinational, the attack is logistically domestic if *any* of the group’s nationalities is the same as the location of the attack.
- 9 = "Unknown"

It is unknown if the attack was logistically international or domestic; the nationality of the perpetrator group is unknown.

Note: The nationality of the perpetrator group is not included in the GTD, but was collected as an auxiliary variable for the purpose of coding the international/domestic variables. It is not available for distribution.

Also, perpetrator nationality is only identified for groups or organizations, not for individual perpetrators. For cases where the perpetrator group is unidentified, or the attack was carried out by unaffiliated individuals, the nationality of the perpetrator group is unknown.

International- Ideological
(*INT_IDEO*)
Categorical Variable

This variable is based on a comparison between the nationality of the perpetrator group and the nationality of the target(s)/victim(s). It indicates whether a perpetrator group attacked a target of a different nationality. Unlike the *logistically international* variable, in cases where perpetrator groups represent non-contiguous contested territory (e.g., Puerto Rico, Corsica, Northern Ireland) or a secure border (e.g., West Bank and Gaza Strip) the nationality of the perpetrator group is coded as the parent country and attacks against the parent country are coded as ideologically domestic.

- 1 = "Yes"

The attack was ideologically international; the nationality of the perpetrator group differs from the nationality of the target(s)/victim(s). If the perpetrator group or target is multinational, the attack is ideologically international.

该变量基于肇事者团体的国籍与袭击地点之间的比较。它指示肇事者团体是否跨越边界进行袭击。通常边界为国界，但在肇事者团体代表非连续争议领土（如波多黎各、科西嘉、北爱尔兰）或安全边界（如约旦河西岸和加沙地带）的情况下，肇事者团体的国籍被编码为争议领土，针对母国的袭击被编码为后勤国际。

- 1 = "是"

袭击在后勤上是国际性的；肇事者团体的国籍与袭击地点不同。如果肇事者团体是多国的，则当所有团体的国籍均不同于袭击地点时，该袭击在后勤上是国际性的。0 = "否" 袭击在后勤上是国内的；肇事者团体的国籍与袭击地点相同。如果肇事者团体是多国的，肇事者团体的国籍与袭击地点相同时，该袭击在后勤上是国内的。-9 = "未知" 袭击在后勤上是国际性的还是国内的是未知的；肇事者团体的国籍未知。

注意：肇事者团体的国籍未包含在GTD中，而是作为编码国际/国内变量的辅助变量收集的。该信息不对外分发。

此外，肇事者国籍仅针对团体或组织识别，而非个体肇事者。对于肇事者团体未识别或袭击由无关联个体实施的情况，肇事者团体的国籍未知。

国际-意识形态(INT_
IDEO) 分类变量

该变量基于肇事者团体国籍与目标/受害者国籍的比较。它指示肇事者团体是否攻击了不同国籍的目标。与后勤国际变量不同，当肇事者团体代表非连续争议领土（例如波多黎各、科西嘉、北爱尔兰）或安全边界（例如约旦河西岸和加沙地带）时，肇事者团体国籍编码为母国，对母国的攻击编码为意识形态国内。

- 1 = "是"

此次袭击是意识形态国际的；肇事者团体的国籍与目标/受害者国籍不同。如果肇事者团体或目标为多国，则袭击是意识形态国际的。

0 = "No"	The attack was ideologically domestic; any and all nationalities of the perpetrator group are the same as the nationalities of the target(s)/victim(s).
-9 = "Unknown"	It is unknown if the attack was logistically international or domestic; the nationality of the perpetrator group or the nationality of the target/victim is unknown.

Note: The nationality of the perpetrator group is not included in the GTD, but was collected as an auxiliary variable for the purpose of coding the international/domestic variables. It is not available for distribution.

Also, perpetrator nationality is only identified for groups or organizations, not for individual perpetrators. For cases where the perpetrator group is unidentified, or the attack was carried out by unaffiliated individuals, the nationality of the perpetrator group is unknown.

International- Miscellaneous
(INT_MISC)
Categorical Variable

This variable is based on a comparison between the location of the attack and the nationality of the target(s)/victim(s). It indicates whether a perpetrator group attacked a target of a different nationality. Unlike the *logistically international* and *ideologically international* variables, it does not require information about the nationality of the perpetrator group. If an attack is international on this dimension, it is necessarily also either *logistically international* or *ideologically international*, but it is not clear which one. If an attack is domestic on this dimension, it may also be *logistically international* or *ideologically international*, or domestic on all dimensions.

1 = "Yes"	The attack was miscellaneous international; the location of the attack differs from the nationality of the target(s)/victim(s).
0 = "No"	The attack was miscellaneous domestic; the location of the attack is the same as the nationalities of the target(s)/victim(s).
-9 = "Unknown"	It is unknown if the attack was miscellaneous international or domestic; the nationality of target/victim is unknown.

International- Any of the above
(INT_ANY)
Categorical Variable

1 = "Yes"	The attack was international on <i>any</i> of the dimensions described above (logistically, ideologically, miscellaneous)
0 = "No"	The attack was domestic on <i>all</i> of the dimensions described above (logistically, ideologically, miscellaneous);
-9 = "Unknown"	It is unknown if the attack was international or domestic; the value for one or more dimensions is unknown.

0 = "否"	这次袭击在意识形态上是国内的；肇事者团体的所有国籍与目标/受害者的国籍相同。
-9 = "未知"	这次袭击在后勤上是国际的还是国内的尚不清楚；肇事者团体的国籍或目标/受害者的国籍未知。

注意：肇事者团体的国籍未包含在GTD中，但作为辅助变量收集，用于编码国际/国内变量。该信息不对外分发。

此外，肇事者国籍仅针对团体或组织识别，不针对个体肇事者。对于肇事者团体未识别或袭击由无关联个体实施的情况，肇事者团体的国籍为未知。

国际-杂项(INT_MISC) 分类
变量

该变量基于袭击地点与目标/受害者国籍的比较。它指示肇事者团体是否袭击了不同国籍的目标。与后勤国际和意识形态国际变量不同，它不需要关于肇事者团体国籍的信息。如果袭击在此维度上是国际的，则它必然也是后勤国际或意识形态国际，但具体是哪一种并不明确。如果袭击在此维度上是国内的，它也可能属于后勤国际或意识形态国际，或在所有维度上都是国内的。

1 = "是" 该袭击是杂项国际的；袭击地点与目标/受害者国籍不同。0 = "否" 该袭击是杂项国内的；袭击地点与目标/受害者国籍相同。9 = "未知" 未知该袭击是杂项国际还是国内的；目标/受害者国籍未知。

国际-上述任意一种
(INT_ANY)
分类变量

1 = "是"	该袭击在以上描述的任意维度（后勤、意识形态、杂项）上是国际的
0 = “否”	此次袭击在上述所有维度（后勤、意识形态、杂项）上都是国内的；
-9 = “未知”	未知袭击是国际的还是国内的；一个或多个维度的值未知。

First Source Citation
(scite1)
Text Variable

This field cites the first source that was used to compile information on the specific incident.

Note: This field is presently only systematically available with incidents occurring after 1997.

Second Source Citation
(scite2)
Text Variable

This field cites the second source that was used to compile information on the specific incident.

Note: This field is presently only systematically available with incidents occurring after 1997.

Third Source Citation
(scite3)
Text Variable

This field cites the third source that was used to compile information on the specific incident.

Note: This field is presently only systematically available with incidents occurring after 1997.

Data Collection
(dbsource)
Text Variable

This field identifies the original data collection effort in which each event was recorded. Each value corresponds to a different data collection project or group. The three largest (PGIS, CETIS, and ISVG) correspond to the original collection efforts for GTD1, GTD2, and GTD3, respectively. The additional values correspond to retrospective data collection efforts undertaken by START as part of larger research projects at the center. The originating source in those projects was used to identify cases that were not in the GTD but could be identified in other reputable media sources. These cases were then researched, sourced, and added to the GTD.

第一来源引用
(scite1) 文本变量

该字段引用用于编制特定事件信息的第一手来源。

注意：该字段 目前仅对1997年之后发生的事件系统性地可用。

第二来源引用
(scite2) 文本变
量

该字段引用用于编制特定事件信息的第二个来源。

注意：目前该字段仅系统性地用于1997年之后发生的事件。

第三来源引用
(scite3) 文本变
量

该字段引用 用于编制特定事件信息的第三个来源

注意：此字段目前仅系统性地适用于1997年之后发生的事件。

数据收集
(dbsource) 文
本变量

该字段标识记录每个事件的原始数据收集工作。每个值对应不同的数据收集项目或团体。最大的三个（PGIS、CETIS和ISVG）分别对应GTD1、GTD2和GTD3的原始收集工作。其他值对应START作为中心更大研究项目一部分进行的回顾性数据收集工作。这些项目中的原始来源用于识别那些不在GTD中但可以在其他知名媒体来源中识别的案例。然后对这些案例进行研究、溯源，并添加到GTD中。

Appendix I: Data Collection Efforts for the Global Terrorism Database

Data Collection Effort	# of Events	Originating Sources
Anti-Abortion Project 2010	186	Cases from the National Abortion Federation and other data sources on anti-abortion attacks in the United States
Armenian Website	40	Australian Turkish Media Group
CAIN	1588	Conflict Archive on the Internet for Northern Ireland
